

Dry Ice Service

Chilled Packaging™ and Air Liquide have identified a need in the market place for a cost effective method of transporting high quality frozen food, in quantities too small to justify using a dedicated refrigerated vehicle. By combining Air Liquide's dry ice with Chilled Packaging's recyclable temperature controlled systems, you are assured the perfect solution, just imagine how this could change your business and broaden your customer base!

By combining the correct amount of Air Liquide's dry ice and Chilled Packaging's speciality packaging, your product will arrive with your customer in the same frozen condition that it left your premises, because the finest food deserves the very best of care.

Air Liquide are the UK's leading manufacturer of Dry Ice, The partnership with Chilled Packaging means that combined, we have all of the experience and technology in place to offer our customers precise information or advice about your packaging requirements, including how much Dry Ice will be required to suit your shipping needs.

Air Liquide UK Limited have a flexible, expendable refrigerant called Cardice® which can solve many of your freezing, chilling and cooling requirements.

Cardice® (Dry Ice) is used extensively in the following markets:

- Freight Forwarding – temperature maintenance of perishable goods during transit
- Chilled & Frozen Food Manufacture and Distribution – applications from freezing and chilling, temperature control of produce in transit and controlling temperature during cutting and mixing.
- Low Temperature Sample Sending – where temperatures must be maintained on individual packages
- Airline Catering – holding food at temperature where no mechanical refrigeration is available

Air Liquide have a comprehensive Cardice® (Dry Ice) product range:

- Standard pellets in 11.5kg bags
- Bulk standard pellets supplied loose
- Bulk mini pellets supplied loose
- Mini-pack bags available in 1kg, 1.5kg & 2kg options (Mini Bags sizes can be tailored to suit your needs)
- Solid blocks 11.5kg
- Bulk pellets & mini-packs are supplied in returnable Insulated containers
- Minimum order quantities from as little as 100kg

Dry Ice Containers:

Air Liquide UK Limited offer a range of three high quality containers for Cardice® (Dry Ice) storage. All three containers sizes are roto-moulded from food-grade polyethylene, which ensures compliance with hygiene requirements for food contact and corrosion resistance.

- Hygienic construction from food-grade materials
- Top quality polyurethane insulation better than 0.4 W/m²/°C
- Storage loss of 3-4% per day or less
- Flush fittings, clean lines, no protrusions
- Wide range of sizes to suit all users
- Durable construction from rotomoulded polyethylene
- Rust-proof passivated steel fittings

Air Liquide we will deliver your Dry Ice to a timed delivery slot to suit your business needs. The Dry Ice will be delivered in mobile insulated containers, which, when placed in the correct location within your business, will keep the Dry Ice effective for around 1 week.
