

Dexion Storage Machines

– improving productivity

Dexion computer-controlled storage and transfer systems fit perfectly with almost all types of storage requirements.

With automated storage you can significantly improve the efficiency of the picking process.

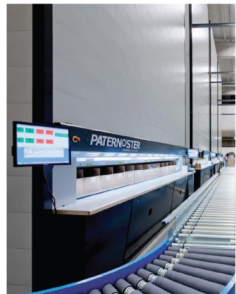

Benefits of Dexion Storage Machines

- Save on floor space by over 70% compared to standard storage systems.
- One user can operate several machines at once.
- Improve picking efficiency by up to 60% and picking costs by 50%.
- Several orders can be collated at the same time – Batch Picking.
- Paperless picking is possible.
- Prevent unauthorised use and reduce losses.
- Items remain clean and in order.
- Systems are tailored and customised to your specific operating environment.
- Adaptable for a varying range of sizes and weights.

TC2000 – Software Control System

Easy to use, PC, Windows based control software, with full Warehouse Management System capabilities, allows Dexion storage machines to be operated as either stand alone machines or integrated into most other WMS software.

The TC2000 software turns the Dexion storage machines into highly efficient warehouse picking systems, with the possibility of secure multi-user access, batch picking and support for bar code readers and printers. The control software can be used for multiple machines at the same time.
