# Investing in the Future

**G&P Cases has a long history spanning more than fifty years producing quality industrial packing solutions to our customers.**

With an eye to the future and our desire to constantly improve the services we offer, we have recently invested heavily in new manufacturing equipment enabling us to cut lead times, reduce waste and offer our valued customers additional services. Our plywood machining facilities have been upgraded with a Homag Beam Saw and a Holzer Wall Saw.

The new Homag Beam Saw makes use of the latest technology allowing us to precision cut large quantities of plywood with optimizing software reducing waste and the new Holzer Wall Saw uses Cam software allowing for greater precision of cut for small works.

Alongside the addition of these two machines, we have also invested in a new CNC Router that will enable us to offer a much wider variety of manufacturing options to our customers and opens a new and exciting opportunity for our company to expand into other sectors of manufacturing.

With our expert knowledge and exemplary reputation in manufacturing industrial packing solutions, we feel that with the addition of the CNC Router to our facility will greatly enhance our ability to supply our customers with a much broader and more comprehensive service.
