

# TITAN EXPANDS FLEET WITH THE ARRIVAL OF 12 NEW ELECTRIC VANS

TITAN has announced the arrival of 12 new electric vehicles (EVs) for use in Denmark and the United Kingdom as a major step towards sustainability. The reefer engineers in Denmark and the site maintenance and self-storage teams in the United Kingdom will use these electric vehicles.

The addition of these 12 EVs increases the company's percentage of electric service vans to over 50%, enhancing the company's already impressive sustainability record. Currently, over 70% of TITAN's automobiles are electric.

Just before or after the Christmas and New Year's holidays, the arrival of these EVs demonstrates the company's commitment to implementing clean energy solutions as soon as possible.

TITAN has a long history of prioritising the environment, and multiple eco-friendly initiatives are currently in progress. The introduction of these EVs is the most recent illustration of the company's commitment to reducing its carbon footprint and promoting the use of clean energy.
