

# Test Engineer (Electrical/Electronic Equipment)

## About the Job

---

Due to continued growth and investment we are seeking a qualified Electrical/Electronics Engineer to join our product safety management team in the United Kingdom.

This job offers continuous professional development in a modern high-tech laboratory.

### Do you have?

- A good understanding of circuit design and electronic components
- Knowledge of product safety standards and compliance legislation
- A background in electrical appliances, industrial, scientific or medical equipment

### Are you?

- Qualified to technician or engineering degree level in a relevant discipline
- Customer focussed and able to multitask
- Keen to expand your knowledge

Experience of accredited testing or working in an organisation accredited by UKAS would be advantageous.

Your focus will be on providing expert technical input and testing support for product approvals and conformity matters relating to a wide range of electrical and electronic products exported all over the world.

### Benefits

We will provide further technical training and offer you the chance to develop a long and rewarding career with many opportunities to fulfil your potential. Depending on your experience, you can expect to receive a flexible competitive salary with progressive reviews subject to your personal development.

For more details please apply online ASAP as immediate interviews and starts are available.

Salary: £22,000 to £32,000
