

**PRODUCTS &
SERVICES**

ALL DESIGNERS

OUR IN-HOUSE CAPABILITIES:

NEON MANUFACTURE

Flashing, spelling, dimming and much more.

VINYL GRAPHICS

Window etch, lettering, vehicle graphics etc.

SIGN WRITING & GILDING

Traditional hand painted lettering and gold leaf.

COLD CATHODE LIGHTING

Bespoke straight or curved sections.

DIGITAL PRINTING

Up to 1600mm wide onto rolls.

CNC FLAT BED ROUTER

Wood, acrylics, composites etc.

UV BONDING OF ACRYLIC & GLASS

Cabinets, displays, cases etc.

MIG / TIG WELDING

Metal frames etc.

ACRYLIC FABRICATION

Letters, boxes etc.

METAL / COMPOSITE FABRICATION

Letters, trays, boxes.

AGEING OF MATERIALS

Wood, rusted steel, tarnished metals, patinating etc.

ELECTRICAL WIRING

PAT testing, light bulb wiring.

INSTALLATION CREW

PASMA, IPAF certified, CSCS, Sign making NVQ qualified, Safe Contractor.

LED LIGHTING / LIGHT BULBS / FAIRGROUND LIGHTS

As part of a project.

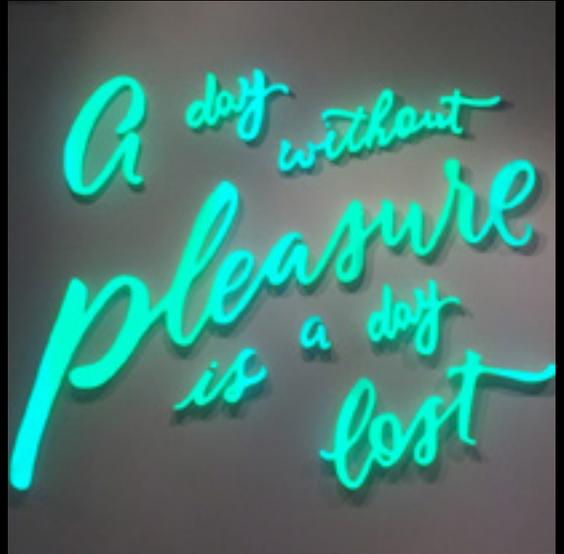

ABOUT US

Whatever your project, A1deSIGNS can help, from design through to manufacture and installation. Our in house design and manufacturing capabilities uniquely position us to work with you on your project.

With our factory based just south of London, we strive to produce quality products at competitive prices. No matter how big or small your company or your project may be, we are happy to work with you to ensure that your signage requirements are met.

With a combined experience of over 100 years in the industry, you can trust A1deSIGNS to help with your project from start to finish. For all your signage needs, please feel free to get in touch with us over the phone, via email or even pop in to our factory for a chat.

NEON MANUFACTURE

Neon, the art form that started it all.

For the times when imitations just won't do, A1deSIGNS is the place to go.

As specialist neon sign manufacturers with over 100 collective years experience in both neon signage and general signage, we are uniquely qualified to turn your ideas into a neon reality. Your sign will be hand formed at our factory here in the UK and then assembled by our in house team, meaning that at any point, you can contact us and know exactly what is happening with your order.

If you wish, you could even arrange to come and see your sign being made.

With its appealing glow and inviting warmth, there really is no reason why a neon sign is not the perfect choice when it comes to your next sign.

NEON EFFECT LED

There are times when a traditional neon sign does not meet your project's requirements. You may want to travel with the sign without the risk of any breakages. You may want a low voltage sign that is still compact and quick to install. It may be that the venue you want your sign to be displayed in will not allow traditional neon.

Our Neon Effect LED is perfect for you. We use a combination of high quality materials, along with precision cutting to ensure the design is as accurate as possible to what you require.

Our product can be made using cold or warm white LEDs, using a static colour, or using RGB LEDs so that you can change colours as you wish.

Suitable for indoor or outdoor use, our LED Neon signs are the perfect solution for when traditional neon is not suitable.

Do What
you Love

RETAIL DISPLAYS

When it comes to retail signage and displays, you can look to us to help design, create and install your perfect display. With our wealth of experience working with a wide variety of materials and construction methods, we can help create something that fits within your budget and will attract the attention of the general public.

Light boxes, neon, vinyl graphics, digital prints and built up letters are all things we can use to help create a visually stunning display for you. Whether you have a single shop or a chain, we are able to help you achieve the look you want.

A retail display is a really effective way to bring in more people to your shop, or introduce a new product or offer, so it is key to make sure you are making the most out of your available space with visually striking signage.

GENERAL SIGNAGE

From fascia signs, engraving, menu boards, post and panel systems through to wayfinding schemes and pop up displays we can manufacture all types of general signage that cover a wide variety of styles, uses and construction methods.

Signage is just about everywhere. It's important that whatever style or type of signage you are considering, it not only stands out but is suitable for your needs and the situation in which it is going to be used.

After listening to your requirements and understanding not only the design brief but the look and feel that your company wants to purvey, we have the experience to be able to provide sound advice on materials, quality and design. We will strive to ensure your expectations are met and you are provided with signage that meets your needs.

BUILT-UP LETTERING

Built-up letters are a great way to stand out from your competition, they can either be used as part of an external fascia sign, internal wall signage or as a free standing display.

We can manufacture your letters using a variety of materials including acrylic, steel, foam PVC or aluminium. Using vinyl, paints and Ageing techniques, we can then customise the letters further with any custom colours and a variety of different finishes, making sure that your sign is truly unique.

After you have chosen your letter style, material and finished colour, you also have the option of lighting. Light bulbs, cabochon / fairground bulbs, LEDs and neon are all available to you, each changing the way your letters look and light up.

With all of these options available to you, it truly is no wonder why built up letters are one of the most popular ways to liven up a shop front or display.

SIGN WRITING & GILDING

The art form of sign writing is perhaps the oldest form of signage there is. The skill of hand painting a design onto a wall, or board is something that is learnt over years of dedication and practise. The mastery of this skill is something that is almost lost in this age where everything is machine cut or designed on a computer.

Gilding is another almost lost art. The act of covering a lesser metal, or other base material in gold is something that has often been replaced with gold colour paints and vinyl. However if you want that true gold effect, there is no better way than having gold leaf applied to part of your sign.

We have people skilled at both sign writing and gilding, with decades of experience in both forms, so if you want to have some personalised signage in these vintage styles, get in touch today.

VINYL & DIGITAL PRINTS

Vinyl graphics and digital prints are one of the most versatile signage forms on the market. It doesn't matter whether you have a low budget and want something simple to start off with, or if you are working on a high end project and want something that looks top of the range. Vinyl and digital prints can be used for everything.

Self adhesive vinyl comes in a wealth of colours and finishes and with many colours being suitable for reverse cutting, you can utilise your windows for additional advertising without the need to hang anything up.

Because it is cut by machine, vinyl can be used to create intricate designs and can even be layered over itself allowing for multiple colours to be used in a design.

However there are occasions when vinyl is not suitable for your design. When you have gradients of colours, or if you want specific colours, a digital print allows you to have an extra level of customisation that vinyl may not permit. With the addition of a laminate layer, your digital print can be shielded from the rain meaning you can enjoy your digital prints both indoors and outdoors.

VEHICLE GRAPHICS

If a large part of your work involves driving, or having your vehicles driven from place to place, what better way to get your name out there than branding your vehicles?

Once your vehicle is branded with your company name, logo and contact details, every time your vehicle is out on the road you are getting additional advertising at no extra cost.

Whether you want to just have vinyl lettering applied to each side, or if you want full colour digital prints, the sky really is the limit.

Do you need to create a unique design but don't know where to start? Our in house designers can sit with you either in person, via email or over the phone and work with you until your vehicle graphic design is exactly what you require.

Accuracy is key, our specialist machines will ensure that any vinyl lettering or logo is precision cut, so the finished product will look just as your design shows.

AGEING & ANTIQUING

One of the most popular trends these days is having a sign that looks older than it is. The ageing of metal and wood is something that we have been asked to do on many occasions and we can achieve some great finishes.

We can turn a brand new sheet of wood into something that looks like it washed up on a beach. We can take metal panels and letters and in a matter of days make them appear as though they have been out in the elements for years by either rusting or tarnishing the material.

The added bonus of having a new sign made to look old is that it retains its integrity. By adding a layer of rust to a steel panel, you are keeping the rigidity of the new material and having the look of the old, when ageing wood you don't have to worry about it being in poor condition.

COLD CATHODE LIGHTING

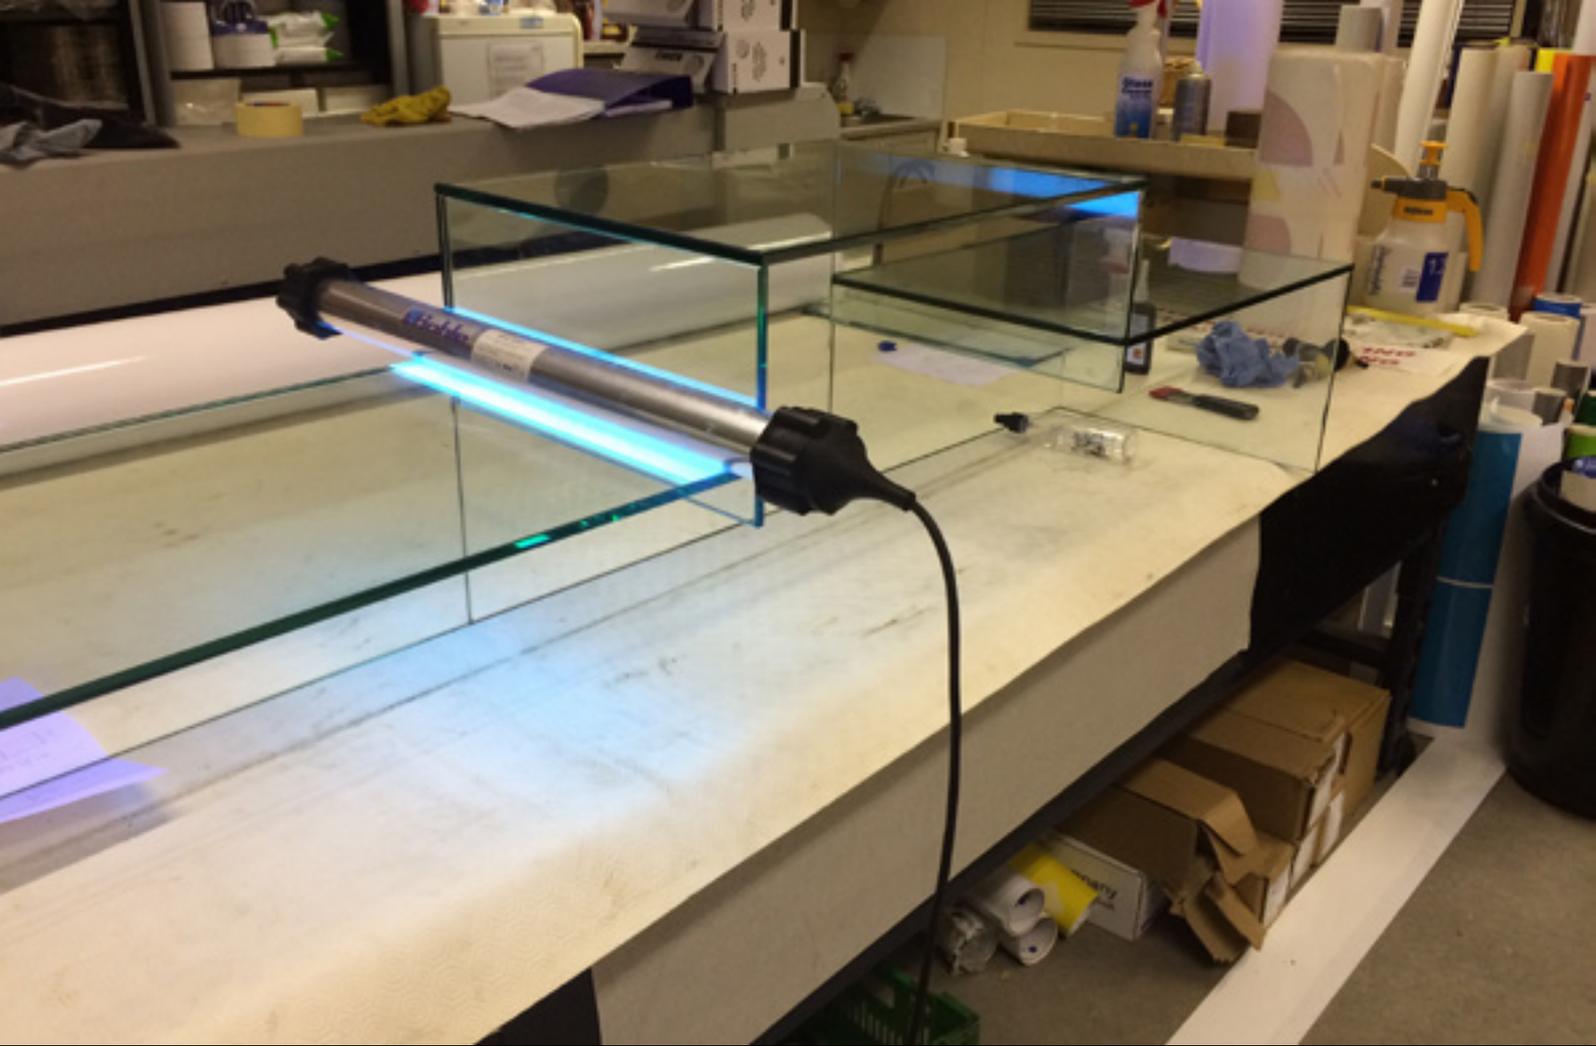

Cold Cathode Lighting is the perfect choice for bespoke, high quality, internal and external architectural lighting applications; cold cathode lighting can be used to highlight features and building lines on the exterior of a building, enhancing the aesthetics of the architecture.

Cold Cathode Lighting can be made to follow any contour and be placed in such a way that it will give a constant seamless light.

When it comes to efficiency of the Cold Cathode Lighting you are looking at up to 60 lumens per watt of power used, depending on colour, which meets and exceeds the Part L energy performance building regulations

We can also provide RGB Cold Cathode lighting systems which allow you to control channels of Red, Green and Blue to wash walls or ceilings with a wide variety of colours.

UV BONDING

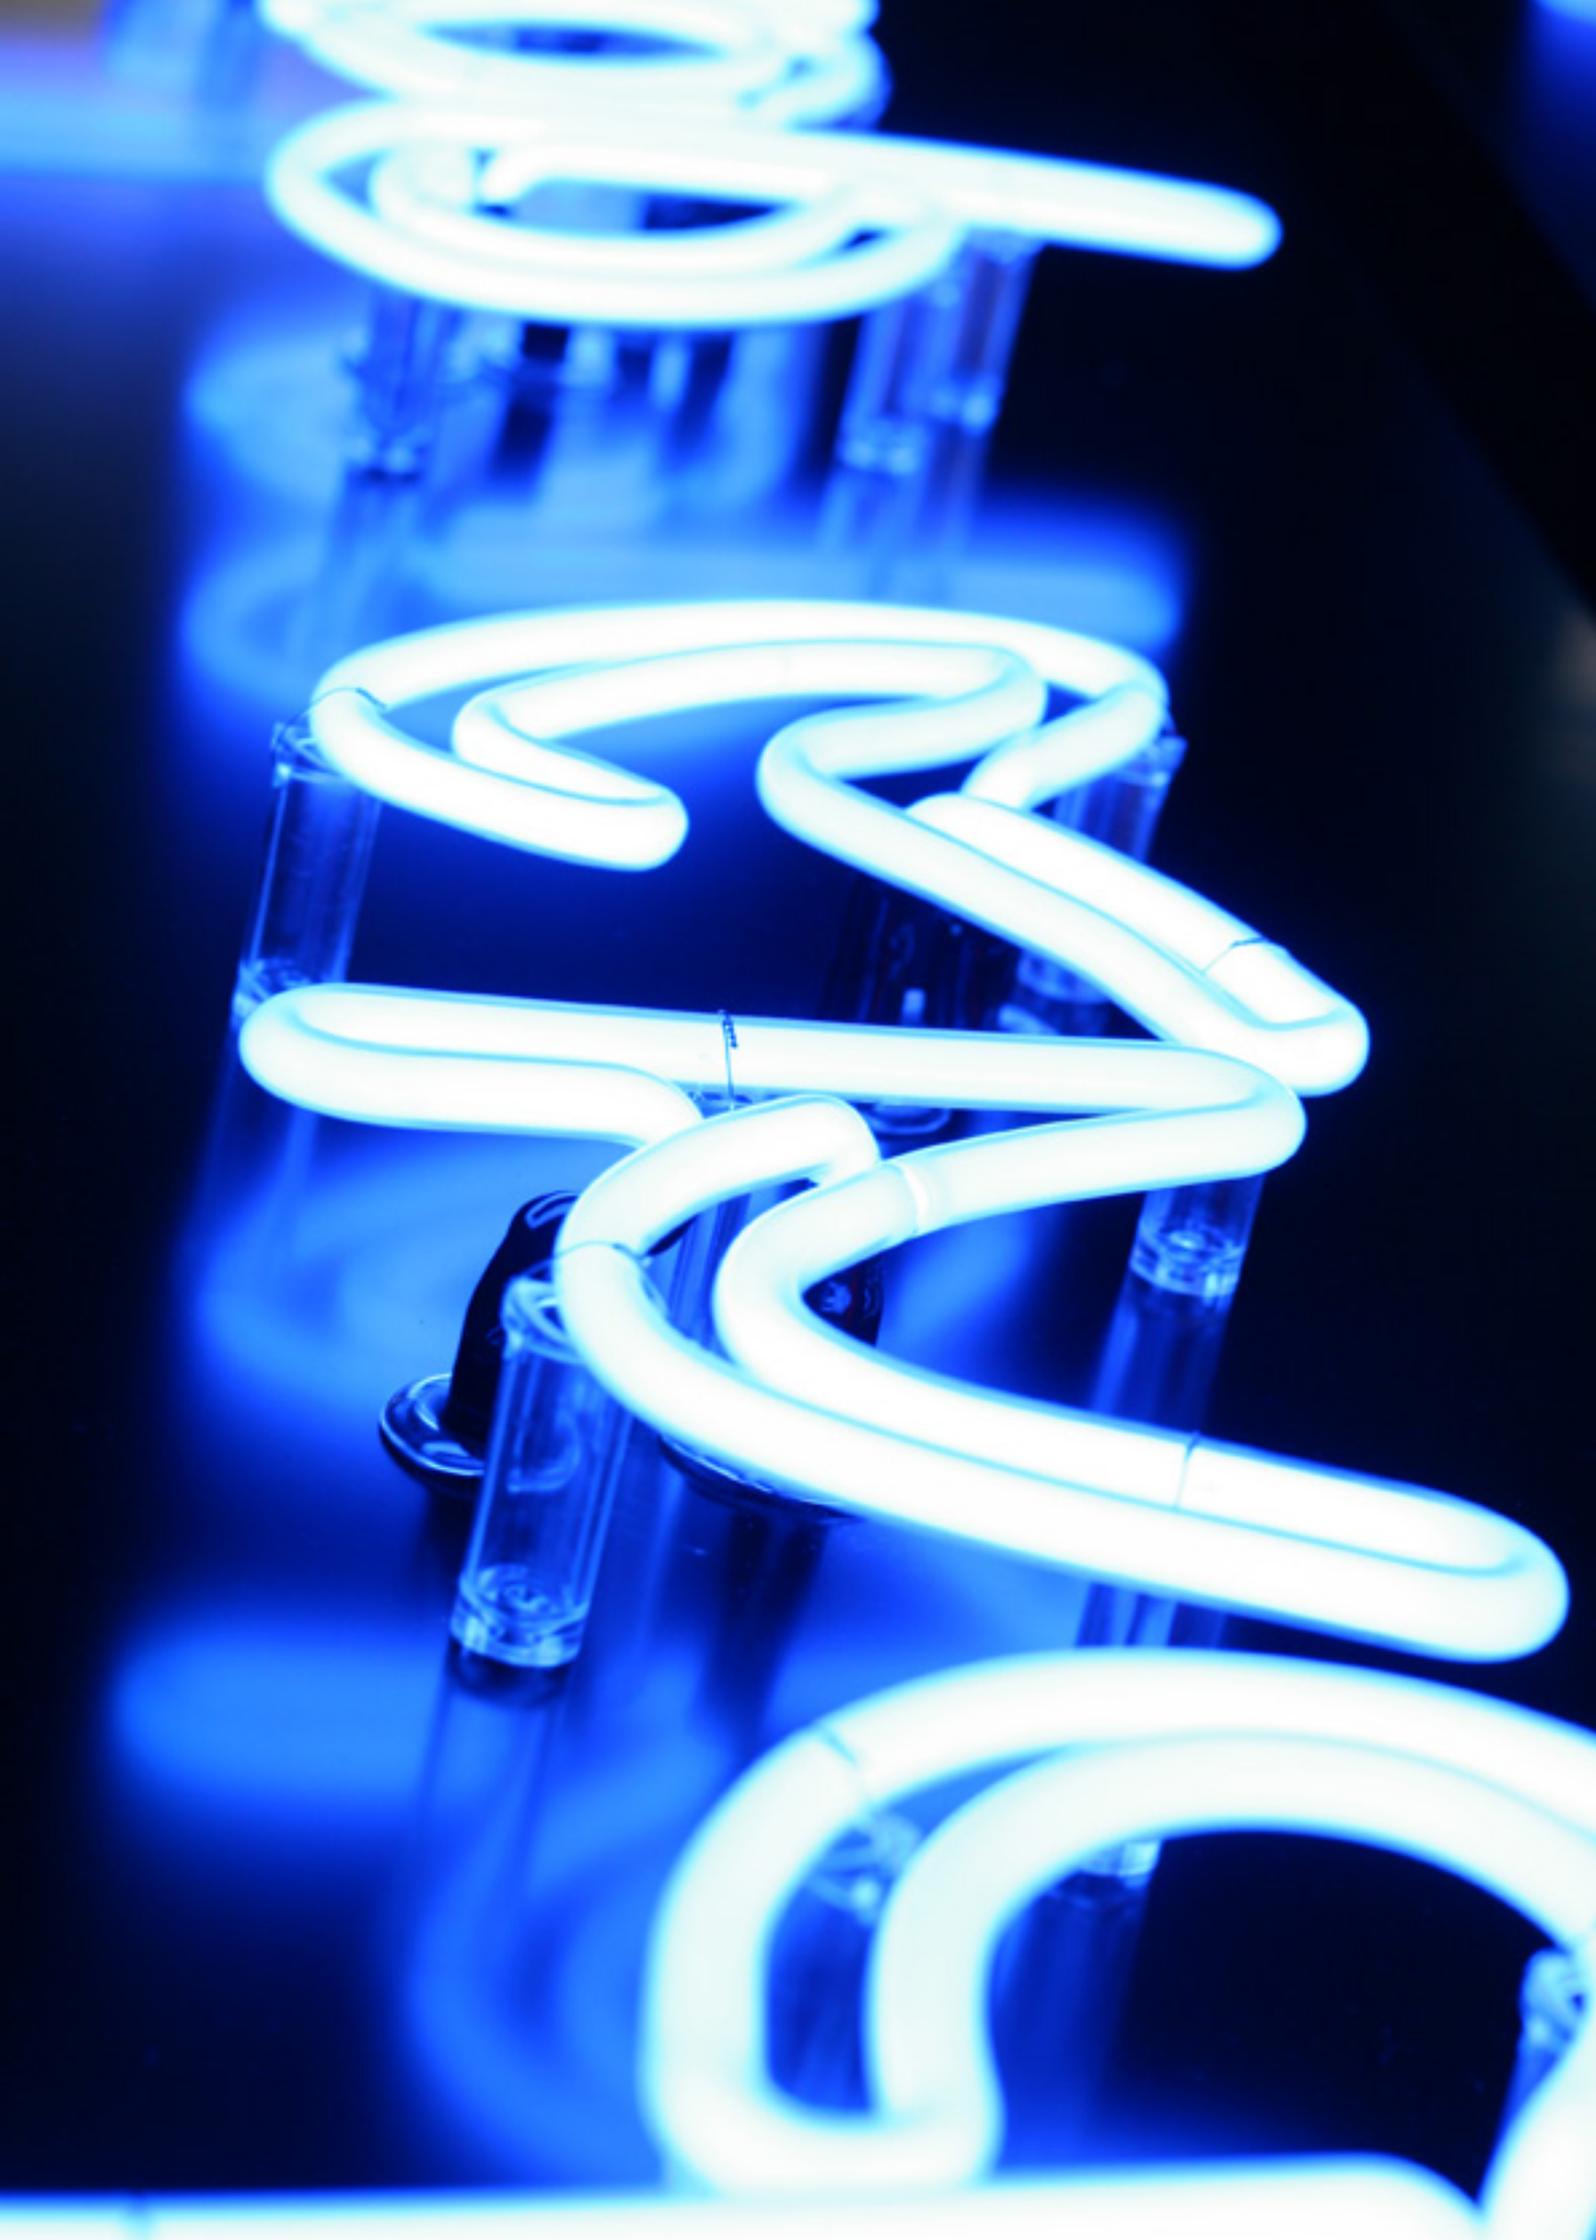

UV bonding is a great way to create bespoke glass furniture, shelves or displays. With the use of UV cured adhesives, we can make endless creations from glass alone, with bonds that are not only crystal clear, but that are stronger than the glass itself.

We use toughened glass to ensure that your finished product is going to stand up to the day-to-day stresses display cabinets or shelves can often be put through.

With the combination of frosted glass and lighting, we can also create bespoke features that can go in your place of business or even your home.

If you have any ideas, or simply wish to discuss what you could achieve with UV bonding, give us a call today to see what we can do for you.
