Slim, shape, tone...
...in the comfort of your home!

HomeFlex

body sculpting

HomeFlex-Lipo uses LED light to help naturally slim, shape and tone areas including the waist, hips, thighs and upper arms when combined with a healthy diet and exercise.

Professional salons and spas have long been using LED Light Therapy for fat reduction and body shaping. The highly successful HomeFlex body shaping system is now available as a 4 pad unit allowing you to shape the areas you want in the comfort of your home.

See the results for yourself...

How it works

The light (635nm) emitted from HomeFlex-Lipo causes the fat cell membranes to temporarily alter the permeability of the cell. This brief change allows the fat contents to seep out from the cell into the interstitial space from where it can be processed by the lymphatic system. Exercise completes the process of burning the energy resulting in immediate slimming and toning – 'in the areas you want'.

The science behind HomeFlex-Lipo

A chromophore is the part of a molecule responsible for its colour that absorb certain wavelengths of visible light. Red light (635nm) causes the fat cell membranes to lose their round shape, changing the permeability of the cell. This alteration of the cell triggers the release of a lipase enzyme that breaks triglycerides (fat) down into monoglycerides and fatty acids, which releases energy, shrinking the cell.
