

Expand your workspace with mezzanine flooring

Whether you need more space for new offices or storage systems, mezzanine flooring is the answer... unless you prefer wasting a lot more time and money relocating to new premises. No? We didn't think so.

If you're not a hundred percent sure as to what a mezzanine floor is, it's a semi-permanent structure that creates an additional layer in between a part of your actual floor and the ceiling, making more storage space appear out of thin air (literally).

Increase storage space with mezzanine flooring

This is one of the most popular benefits of mezzanine flooring in warehouses, offices, and even retail settings.

When all you can count on is your floor space, it's easy to run out of room to store your goods or to create workstations for new employees.

The reason why commercial mezzanine floors are so useful is that they take something you already have but couldn't make the most of: all the wasted vertical space right above your head.

By adding this intermediate level, you'll get to use it for whatever you need the most, whether that's more pallet racks, shelving systems, offices, or meeting rooms.

Mezzanine floors are also handy when it comes to creating separate areas. For example, you can use them to introduce offices in your warehouse without compromising on storage space or to keep employees from the same department together.

Save on expansion costs with mezzanine flooring

Imagine paying the exact same rent money but getting more square footage out of it!

As we mentioned before, the alternative to mezzanine flooring is purchasing additional premises or relocating altogether. Needless to say, this can be a logistical nightmare as well as a sizable investment.

Choosing a commercial mezzanine floor, on the other hand, is the most cost-effective (and headache-free) option.

Still, should you eventually decide to relocate in a few years, you can easily bring it with you.

Mezzanine floors also get extra cost-effective points because they can add value to your existing property.

Get custom mezzanine flooring designed for your specific needs and premises layout

If you're wondering whether or not a mezzanine floor can fit in your workplace, the answer is yes.

And no, we haven't secretly been spying on your premises: the reason why we know for sure is that mezzanine flooring is extremely flexible.

Far from being a one-size solution, they can be designed to fit your existing premises, actively allowing you to make the most of their unique layout.

At Raxel, we create mezzanine floors in all shapes, sizes, and levels to help resourceful businesses like yours get more space and perks out of their work, production, or storage premises.

Perhaps the right commercial mezzanine flooring for you allows you to integrate these additional layers with mechanical devices? Or to introduce new meeting rooms without sacrificing your existing offices?

Contact us to tell you more about your vision so that we can turn it into a functional reality with the perfect mezzanine floors for your workspace.
