

## Food Systems — Depositors

Our range of depositors are designed to deal with a wide range of product from fine products such as flours and sugars to heavier products such as seeds, chocolate, dried fruits and even whole grapes.

The depositors are easily integrated into existing continuous or indexing conveyor systems or can be sourced with a conveyor system from Stelram. The depositing area can be custom controlled by the length of depositing tube and blanked off in required areas by cover clips.

Depositing rate is easily controlled by inverter driven drive and can optionally have full HMI recipe control for varying product recipes.

### System Specification

- Variable speed depositing rate
- Height adjustable pedestal
- Quick release hopper for product changeover and cleaning
- Anti-bridging unit

### Options

- Auto hopper feed system
- Hopper level detection
- HMI recipe control
- Sieve attachment
