## TruMatic 6000 Combination Laser Punch

The newest addition to our range of production machines, the Trumpf TruMatic 6000 represents an investment of £700k and brings the latest processing technology to complement our range of manufacturing services. The Trumpf TruMatic 6000 combines both laser and punching processes resulting in a truly flexible, fast and efficient production machine that meets the demands of today's manufacturing.

The Trumpf TruMatic 6000 combines all the benefits of punching and laser processing and is able to produce a broad range of parts and handle even the most challenging jobs successfully. The punching head performs standard contouring and forming tasks, while complex contours are cut by the laser.

- Scratch free processing
- Ability to countersink, form & tap threads
- Reduced setup, greater efficiency
- Reduced manual intervention
- Automated tool change & material loading
- Finished part unloading
- Lights out processing
