

## Heavy Duty Radiator Guards from Jtech Services

Jtech Services have extended the range and style of their Heavy Duty Radiator Guards.

In conversation with our clients, we came to realise that not all applications require the same levels of protection, therefore depending upon the site applications Jtech Services can vary the level of protection that these guards offer to suit the circumstances on site.

Sometimes this includes the use of heavier gauge steel, whereas on other applications all that is required is specially designed internal bracing, whatever is used the aim is for the guards to be robust enough for the situation.

The front opening access panels that feature our SKS locking mechanism for easy authorised access still allow for maintenance and cleaning during their long years of service.

At Jtech Services we appreciate that these circumstances may only be few and far between and so assure our clients that we are happy to service the needs for these 'specials', even if it is just a one off.

It is worth noting that along with the standard white powder coat finish, Jtech Services can also offer their guards in a range of other colours that tie in with either new or existing décor or DDA requirements.

To compliment the guards, the Jtech Pipe Boxing range include the robust powder coated Metal Pipe Boxing system, which can also be vented to match the Radiator Guards.
