

Industrial Stairway Refurbishment from Jtech Services

Jtech R&P Services have recently completed the first phase of a refurb project to bring an old site office back into use at a project in the Shropshire.

The initial step was to make the method of access to the building safe to use, as can be seen from the before and after pictures below.

Having cleaned the area up, a site measure was taken so that new stair treads could be manufacture. The hand railings were removed and shot blasted, and then powder coated, and the stringers were treated on site and painted.

With the preparation and manufacture complete the stairway was re-assembled with all new fixings

The result? Good Lines, Neat joints, and a Quality Finish - just what the client was looking for and all within the financial and time frame budget agreed!

Other applications will now be looked at as the company continues to upgrade its on-site facilities.

If you think we could assist with an aspect of your project why not give us a call.
