LITHIUM BATTERY WARNING LABELS

Did you know it is a requirement for Lithium Batteries to be designated 'Dangerous Goods' during storage and transit? This is because Lithium batteries are subject to what is known as "Thermal Runaway".

This is when the internals of the battery's circuitry malfunction, leading to an increase in temperature within the battery's cells. This in turn causes energy to release from the battery, further increasing overall temperatures with the risk of ignition/fire.

That is why it is important to correctly display durable,

permanent adhesive warning labels on packaging containing lithium batteries, to improve handling safety and packaging compliance.

Our Lithium battery warning labels are made of durable Gloss Vinyl or Polypropylene with a permanent adhesive ensuring a strong bond throughout the lifespan of the package.

Please feel free to [get in touch](#) if you have any durable labelling requirements. Our team will be more than happy to discuss these with you.
