

PLAIN LABELS **PLAIN LABELS** PLAIN LABELS

We manufacture our plain labels with our end users in mind.

One size does not fit all

Over the past 35+ years of manufacturing labels, we have built up an impressive list of available sizes. This list is ever-growing, with the vast number of different combinations that our customers use, produced to fit all thermal and inkjet label printers.

This includes bespoke shapes, sizes, perforations, slits and additional parts.

Plain does not always mean plain

As well as our standard white materials, we also offer full sets of flood coated labels for you to print onto, to make your labels stand out. This is ideal for warehousing or organising orders. This also includes fluorescents and metallics. Plain or printed blockout materials are also available, should you need to label over existing print.

More than just sticky paper

Along with our range of thermal transfer, thermal direct and inkjet paper, we also offer different varieties of synthetic materials, including vinyl, polypropylene, polyester, polyethylene amongst others. These are suited to extreme conditions, including high temperature, cryogenic, general outdoor use other examples where durability is paramount.

The sticky, or not so sticky stuff

Not only do we produce labels on a large range of different materials, but also a range of different adhesives. We have our standard permanent adhesives up to very aggressive hot-melts and more. We also produce labels on peelable adhesives that include non-residue book and super peel. We supply tagging material that has no adhesive at all.

We offer samples across our full range. Please contact us for more information, or if you have any specific requirements.
