March 20, 2023 | Services

Whether you're an interior designer, a shopfitter or even an architect, you know how hard it can be to find bespoke design services to make a place feel special and unique. LS Engineering has many years of experience providing custom items for businesses across the country to add that special touch to their environment. We know how hard it can be to begin a design process which is why we've made it as easy as possible with our complete design and manufacture design services.

## A Bespoke Design One-Stop Shop

Juggling various businesses to create one piece can be difficult at times and makes adapting to any issues or changes during production very difficult. We offer a beginning-to-end service for our bespoke design services to help you along the way – including design, manufacture and quality check. Our team will be in regular contact with you to make sure the process is on track and ensure you are happy at each step and get your approval on the product.

## **A 100% Bespoke Product**

By creating a bespoke item, you can guarantee that you are getting a 100% unique product and that no other business will have the same decor as you. We design and manufacture your product from scratch without using a template to get an individual product based on your needs. This means you can guarantee that your items are bespoke for you and designed with only you and your business in mind.

## **Top Quality Materials and Finishes**

Our products are manufactured using premium, high-quality metals for a product that is not only practical and stylish but also durable. This makes our products perfect for high-traffic areas such as the shop floor. From stainless steel to aged brass, we have a range of materials for you to choose from to get the best decor for your space and the best finish for your product. Our team can also advise on the best material for your design if you aren't sure.

## **Functionality for your workspace**

Alongside our bespoke design services for decor, we also offer a large range of stainless steel equipment for use in your kitchens, shops and more. So whether you're looking for sinks, sanitising stations or something more complex, we can help with not only your decorative services but your functionality too. We'll work with you to assess your current needs and advise on the best products for you.

## **Suitable for all industries**

No matter your business, our bespoke design services are perfect for all industries and customers including factories, warehouses, retail and more. We work with you to understand your industry and any specifications the product needs to adhere to. Our products can be tailored for hygienic environments, businesses working with food and much more.

## **Put us to the test for your next bespoke design project**

Our bespoke design services are a great way to get a unique item for your business manufactured using high-grade materials for a product to last the years. Alongside our bespoke design services are our stainless steel products for use in your production space which range from storage to cleaning machines. For a quote on our bespoke design services or to begin designing a product, get in touch with us at LS Engineering or email [sales@lsengineering.co.uk](mailto:sales@lsengineering.co.uk).
