We can help set up your Changing Room Protocol

Are you looking for new equipment for your changing rooms to comply with the necessary hygiene protocols? LS Engineering specialises in the manufacture and supply of hygienic stainless steel equipment to help you streamline your processes and ensure you are fully compliant with all necessary requirements. Whether you're looking for a complete refurb or just need to add additional items to your existing system, our team can help with our changing room protocol.

Changing room protocol

The “changing room protocol” is a start-to-finish flow diagram that illustrates each step needed to meet hygiene and cleanliness requirements for production staff within the industry. This protocol also follows the natural stages an employee would follow when they arrive at work and clock in, laying out the entire employee journey.

Store outerwear

The first step for all employees arriving at work is to store the clothes they arrived in. We stock a wide range of different lockers, varying in shape, size and more to ensure you have the employee storage you need for your team.

Barrier step over bench

Our benches provide a handy seat for getting changed and changing footwear and can also come with shoe storage underneath. The easy-to-clean benches come in 3 different sizes or we can make a bespoke bench more suited to your needs.

Put on clean footwear

Being able to put on clean footwear and store their regular shoes is necessary for any changing room. Our shoe storage is the best way to keep your changing rooms free of clutter and reduce fire hazards.

Dispense hand soap

Do you need a new handwash station in your changing rooms? Our soap dispensers are available in either knee push or sensor options to reduce contamination risks for employees and ensure hygiene protocols are met.

Dry hands

Whether you're looking for a roll dispenser or a multi-fold paper dispenser, our towel dispensers come in a variety of sizes so you have the best dispenser for you. All of our stainless steel dispensers are easy to clean and can be made lockable.

Put on PPE and coat

We have a variety of PPE dispensers stocking a range of PPE including aprons, beard snoods, ear plugs, gloves and hair nets. The dispensers are available in single to quadruple dispenser sizes and with a hinged lid for easy filling.

Sanitise footwear

Our footwear sanitising machines are available in both wet and dry options and can clean both boots and shoes with sole sanitise and scrub to ensure all footwear is fully sanitised. If you're not sure which machine is best for you, our team can offer you tailored advice to create your perfect solution.

Sanitise hands

Ensuring hands are sanitised is the essential final step an employee takes before joining the floor. LS Engineering supply a wide range of sanitisation dispensers and stations to make sanitising easy.

Contact us to find out more
