

20ft shipping container bar conversion

We were asked to convert a standard 20ft ISO container into a pop-up container bar. From the initial design stage through to conversion and delivery, our in-house teams took care of the entire project.

The client wanted one large upward opening hydraulic serving hatch and so we created the aperture and built the frame, together with the hatch which was supported on gas struts. A steel personnel door was also fitted, to allow easy access into and out of the unit together with a bespoke re-spray as per client's request.

All internal fit out works were to take place once unit had been delivered as the client had their own team to carry out these works. The unit proved very successful and so the client ordered a second container bar.

If you are looking for any bespoke container conversion projects, please do not hesitate to contact our offices and complete a QUICK QUOTE online.
