

Keeping Road Workers Safe: How Elite Precast Concrete Barriers Protect People, Plant and the Public

Every day, thousands of road workers across the UK face real danger as they maintain and improve the nation's vital transport network. Working beside fast-moving traffic, in unpredictable weather, and often during night shifts, their safety depends on robust planning and on reliable physical protection.

At Elite Precast Concrete, we take that responsibility seriously, Sales & Marketing Director, Owen Batham, believes Elite Precast concrete barrier systems are helping to safeguard road workers, plant, and the travelling public across the country.

Protecting People First

Temporary works zones and traffic management layouts can change daily, but one thing should never change, the protection between people and vehicles. Elite Precast Concrete's Jersey barriers, TVCBs and interlocking block systems provide that first line of defence.

Shielding Plant and Machinery

Construction sites and maintenance projects often involve valuable, heavy machinery operating close to live lanes. A single vehicle strike could cause catastrophic damage or injury.

Elite's modular concrete barriers create a secure, clearly defined perimeter that separates operational areas from the public highway. With interlocking connections and rapid deployment options, they offer a quick, scalable solution that helps protect both personnel and plant, reducing downtime, insurance claims and repair costs.

Safety for the Public

Our barriers don't just protect those working behind them, they also protect road users passing by. The controlled deflection and proven containment performance of Elite systems help prevent secondary collisions, debris scatter and roadside hazards.

We also offer high visibility finishes and custom configurations to improve driver awareness and encourage safer speeds through temporary works zones, states Owen.

Rapid, Reliable and Sustainable

Elite Precast Concrete manufactures its barriers at purpose-built facilities in Telford, ensuring consistent quality, fast turnaround and dependable UK supply. Many of our products are reusable and fully recyclable, aligning with the sustainability goals now central to every major highway and infrastructure projects.

Let's Keep Building Safety Together
