20 MPH SPEED LIMIT REDUCTION ZONES

13th April 2023

Why 20mph Speed Limit Zones are being Implemented

In the event that a vehicle travelling at a speed of 30mph hits a pedestrian, there is a one-in-five chance that the pedestrian will be killed.

A crash at 30mph involves around twice as much destructive potential as a crash at 20mph.

From 17 September 2023, Wales is introducing a default 20mph speed limit on restricted roads. They are the first UK country to implement legislation to have a default 20mph speed limit on roads used by cars, pedestrians, and cyclists.

Benefits of switching to a 20mph Speed Limit

- Reduce the chances of mortality and injury in the event of a collision between vehicles and vulnerable road users.
- Make streets safer for residents and business owners, allowing them to walk and cycle more freely.
- Reduces noise and air pollution.

Stocksigns solutions for 20mph zone reduction

Urban 20/30/40

The Urban Vehicle Activated Speed sign is capable of displaying either a 20 or 30mph reminder coupled with a large "SLOW DOWN" message in white LEDs. It is a simple and cost-effective traffic monitoring device to aid in the reduction of road accidents whilst ensuring public safety.

This sign conforms to TSRGD for UK Highways Compliance and uses energy-efficient technology to ensure carbon footprint is minimised.
