NEWS

*In view of the success of the technical range designed for industrial and medical workplaces, and following numerous requests from our clients, KONCEPT is now available in a new version designed for administrative tasks, by bringing to the Office universe innovative characteristics and basis of previous models.*

# *KONCEPT* INTELLIGENT SEAT *OFFICE*

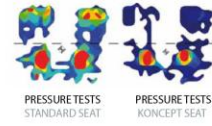

*Equipped with a backrest that offers optimized lumbar support and ergonomic straightened posture, while providing a temporary support on the upper back, KONCEPT OFFICE was designed as the first Office Chair, that Adapts to the movements and posture of its user, redefining the concept of Comfort, Ergonomy and Productivity.*

# SCIENTIFICALLY PROVEN BENEFITS

The Koncept range was developed in close partnership with a company specialized in human motion metrology. Many tests were carried out with different types of seating, people, movements and postures, based on the technology of motion capture. They helped to highlight the benefits of the Koncept seat on posture, and more specifically on the behavior of the vertebral rachis.
