

WIDER CHOICE OF COLOURS FOR METCASE'S UNICASE UNIVERSAL ENCLOSURES

METCASE's UNICASE instrument enclosures are now available in traffic white (RAL 9016) as standard, complementing the existing light grey (RAL 7035) and black (RAL 9005) options. Custom colours are also available on request.

Versatile UNICASE is ideal for a wide range of applications including measuring and control, feedback control, peripheral devices and interfaces, switchboxes, modems, medical and laboratory technology.

These popular aluminium enclosures can be assembled and disassembled quickly and easily – speeding up installations, inspection and maintenance. Removing the U-shaped top allows rapid access to the electronics. PCBs slide in and out of guide rails in the chassis/assembly extrusions. Anodised front and rear panels are supplied (along with four push-in non-slip rubber feet for the base). The front panel is recessed to protect controls.

METCASE ENCLOSURES

METCASE manufactures UNICASE in 10 standard sizes from 185 x 180 x 65 mm to 250 x 300 x 50 mm.

Accessories include PCB fixing screws and a white polyamide (PA 2200) assembly tool that locates the blue threaded nut holders in the extrusion profiles, aligning them perfectly with the top and base cover screws for faster installation.

METCASE can supply UNICASE fully customised. Services include custom sizes (heights, widths, depths), custom front panels, CNC machining, fixings and inserts, painting and finishing, and photo-quality digital printing of legends, logos and graphics.
