Kawasaki Robot

⚠ CAUTIONS TO BE TAKEN
TO ENSURE SAFETY

●For those persons involved with the operation / service of
your system, including Kawasaki Robot, they must strictly
observe all safety regulations at all times. They should
carefully read the Manuals and other related safety
documents.

●Products described in this catalogue are general industrial
robots. Therefore, if a customer wishes to use the Robot
for special purposes, which might endanger operators or
if the Robot has any problems, please contact us. We will
be pleased to help you.

●Be careful as Photographs illustrated in this catalogue are
frequently taken after removing safety fences and other
safety devices stipulated in the safety regulations from
the Robot operation system.

QUALITY SYSTEM CERTIFICATION
ISO 9001

RvA C 024

ISO certified in Akashi Works.

The "duAro" Dual-arm SCARA Robot by Kawasaki Robotics:
A Brand-new Offering that Realizes the Concept of an Innovative Dual-arm SCARA Robot

Features:

Coexistent operations with people

Low-power motors and a speed-reducing function helps the duAro to coexist with people in customers' work operations. Also, in the event of a collision with people and other object, the collision detection function will help to make the duAro's movement stop promptly.

> ＊In order to reduce risk, customers shall, at their own responsibility, establish and implement a risk assessment to coexist with people in customers' work operations before and during use of the duAro.

Saves space

The "duAro" dual-arm robot, with its two coaxial arms controlled by a single controller, can fit into a single-person space. The coaxial dual-arm configuration makes it possible to perform coordinated movement, which has been impossible for even two SCARA robots, in addition to dual-arm operations.

Ease of introduction

The wheeled base on which the arms are placed accommodates the controller. This enables the user to move the robot together with its base to any location desired.

Ease in teaching operation

Direct teaching by holding the robot's arms allows the user to easily teach the robot the movements required of them.

Various options

Teaching operations can be conveyed via tablet or teaching pendant, both of which can be connected to multiple robots. A vision system and standard gripper options are also available.

## Occupying only a space equal to one person, the dual-arm SCARA robot works well with people.

Set up a working range to help to coexist with people.
The duAro's arm is 76 cm long, similar to an average person's working range.

No line changes required to introduce duAro
One duAro occupies only the space of a person, so no line changes are necessary for the robot.

Collision detection function
If the duAro detects contacts and collisions with people or other object, its collision detection function will help to make the duAro's movement stop promptly.

STOP

TOUCH

duAro
Kawasaki

> ＊The collision detection function is designed to reduce the risk of accident. However, this function has its limitation and cannot prevent all accidents, and it is not a substitute for safe and attentive use. It is the customers' responsibility to set up, use and operate the duAro, and please be careful at all times.
	duAro 1	
Application	Assembly, Material handling, Machine tending, Dispensing	
Degree of freedom (axes)	4 × 2 arms	
Max. payload (kg)	2 (1 arm)	
Positional repeatability (mm)	±0.05	
		Arm 1 (lower arm)	Arm 2 (upper arm)
Motion range (°)	Arm rotation (°)	−170 - +170 (JT1)	−140 - +500 (JT1)
	Arm rotation (°)	−140 - +140 (JT2)	−140 - +140 (JT2)
	Arm up-down (mm)	0 - +150 (JT3)[*1]	0 - +150 (JT3)[*1]
	Wrist swivel (°)	−360 - +360 (JT4)[*1]	−360 - +360 (JT4)[*1]
Number of controlled axes	Max. 12	
Drive system	Full digital servo system	
Types of motion control	Manual mode	Coordinated movement of dual arms, Individual movement of one arm [Interpolation mode], Joint , Base, Tool
	Auto mode	Coordinated movement of dual arms, Individual movement of one arm [Interpolation mode], Joint, Linear interpolated motion
Programming	Direct teaching method, Simple teaching method through tablets	
Memory capacity (MB)	4	
General purpose signals	Input (Channels)	12(Max. 28)[*2]
	Output (Channels)	4(Max. 12)[*2]
Power requirements	AC200-230V ±10%, 50/60Hz±2%, 1ø, Max. 2.0kVA	
	Class-D earth connection(Earth connection dedicated to robots), leakage current: maximum 10mA	
Mass (kg)	about 200	
Installation	Floor	
Environmental condition	Temperature (°C)	5 - 40
	Humidity (%)	35 - 85 (No dew, nor frost allowed)

3

Easy to introduce

■ Easy to deploy

START
Connect an air hose
Connect power supply

Using only a power line and an air hose, the robot can replace one worker within the space for a person.

■ System is easy to configure

A tablet is available for teaching multiple robots.

Benefits of introduction

■ Lower total cost

Cumulative cost image

Cumulative cost → High

The more automated, the more cost-effective

Conventional robots

duAro

#1 #2 #3 #4 #5

＊The graph is a concept　　Number of changing lines

Cumulative costs are lower than those of conventional robots, thanks to lower costs for line changes.

○ Even simple hands are able to carry large workpieces

○ The coaxial configuration enables the robot to reach equipment at its back

○ Two arms perform different operations to reduce cycle time

Gripping a workpiece　Fastening screws

4

## Available for a wide range of applications

Fastening screws

Arranging electronic parts in bulk

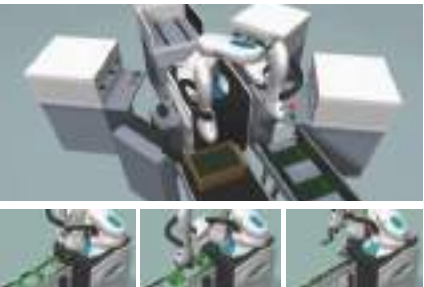

Part-mounting

Spray-coating / UV curing

Loading onto and unloading off of a board inspection device

Device application examples with using board chucks

Inspecting electronic chips

Bagging boards

Inspecting boards

Dispensing

Packaging plastic bottles in boxes

Packaging confections

Loading rice balls onto trays

Tablet and software

Robot Teacher

Offers an easy-to-teach method with intuitive touch operations. Tablet software for duAro

You can use familiar touch operations on a visually simple display to operate and teach your robots. Wireless support eliminates the need for complicated wiring. User-friendliness even for those with little experience operating a robot helps reduce working hours.
System requirement for tablets

Item	Specification
OS	Android 4.3 or later
Resolution	1920×1200 or larger
Network	Wi-Fi

An intuitive and user-friendly display allows even beginners to easily operate the robot.

While monitoring the robot's status, including its current state, you can easily stop or restart operation with the push of a button.

I/O Extension

External I/O signals are available for connecting external sensors, valves, switches and/or lamps.
If the number of standard I/O signals (12 inputs, 4 outputs) is not enough, you can add a board to increase the number of signals. (1) Extension I/O board and/or (2) CC-Link board are available.

Additional Option = (A) Board + (B) Harness in the cart + (C) Connector panel

I/O extension board
This option provides an additional 16 inputs and 8 outputs for hardware signals
(up to 28 input and 12 output ports, together with the standard I/O).

(A)   (B)   (C)

CC-Link board
This option enables you to connect the robot controller to a CC-Link fieldbus network
(as a remote device station).

(A)   (B)   (C)

Device type		Slave (remote I/O device)
Baud rate		Select one from 156 Kbit/s, 625 Kbit/s, 2.5 Mbit/s, 5 Mbit/s or 10 Mbit/s
I/O counts	Max. bit count	Input: 224, Output: 224 (the last 16/16 bits are for system)
	Max. word data	Input: 32, Output: 32
Version		Version 1.0 / 1.1 / 2.0
Communication service		Polling
Transmission medium		Cable exclusive for CC-Link
Configurable stations (address on CC-Link)		1-64

Power harness

A 5m-long harness for supplying primary electricity can be linked with the cart connector.

Programming tool

K-ROSET

Kawasaki Robot Solutions
K-ROSET

Kawasaki Robot's offline programming tool enables a variety of production configurations

The application can build 3D models of robots, peripherals and products to verify various system configurations. Verification of operation time of robots and interference with surrounding objects ahead of introduction can reduce the risks associated with the initial system launch. The tool also has rich support functionality to create motions and programs for the robots, thereby contributing to a reduction in working hours.

Robot simulation technology
- The virtual robot controller technology that Kawasaki has developed over the years can estimate motion trajectories and cycle times as accurately as the hardware robot controllers.
- You can operate the same tablet as one used for the real machine.

Layout design
- Capture data from 3D-CAD to arrange the products. (STL format)
- Interference check function allows you to check if there is contact among models.
- (Interactive) Wizard ensures reliable operations even for those who are unfamiliar with layout design.

Operation environment
- Available in common Windows environments Supported OS: Windows® XP, 7 (x86, x64)
- Available in four languages. Japanese/English/Chinese/German

Teaching and programming
- Teach point modeling facilitates checks for working positions and moves robots to their working positions.
- Coordinated movement setting allows you to easily teach multiple arms.
- You can check the status of robot operations and I/O signals.

Linking with a tablet
The tool can link with a tablet for actual robots.

Drawing
Interfering models are highlighted and a robot's working position (teaching point model) and motion trajectories are displayed.

Program editing
Keeping those who are unfamiliar in mind, this tool allows you to add an item that offers instructions for editing a program.
Comparing the programs before and after modification, you can review modification details during a programming operation.

Monitoring
The states of I/O signals are shown in graphs. You can monitor running program steps and robot status.
Kawasaki vision system

We've customized and introduced an advanced 2D-vision system that can flexibly and quickly support broad applications into duAro.

Features

Pursuit for "Easy to Use"

The easy operation menu customized for duAro enables those who handle industrial robots or vision devices for the first time to make full use of the functionality quickly (an advanced menu is also available according to customers' applications).
Also, you can use a tablet to make duAro conduct correction movements easily, with no need to edit any program.
(Sophisticated processing, such as variety discrimination or barcode recognition, requires AS programs.)

Activate correction easily from a tablet

Sophisticated menu supports diversified applications

Examples of sophisticated menu
·Variety discrimination
·Defect inspection
·Barcode recognition, etc...

K-VFinder Kawasaki Robot Solutions

Pattern-matching   Binarization   Color processing

Embedded in duAro's compact body

All vision devices are embedded in or can be attached to duAro; small form factor without any need to rearrange wiring after moving duAro.

Cameras and lights can be easily attached

Vision processing software is embedded in duAro

✻No display, mouse or keyboard is included in the accessories. Prepare your own if necessary.

Minimize burden of reconfiguration after movement of duAro

Reconfiguration of a robot is usually required after moving it or moving equipment around it. However, with the vision system, the helpful "device correction" corrects the position information to restart duAro swiftly.
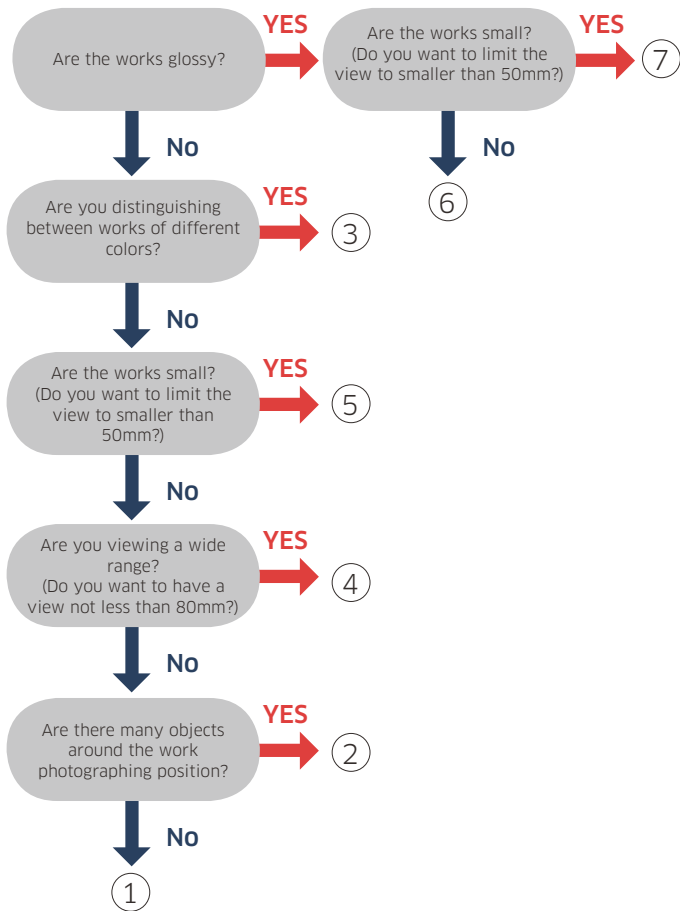

Move

Vision correction
Restart swiftly!

Device selection

According to the type of work and environment, select the combination of "camera," "lens" and "light" from the choices below. Use the flowchart if you are not clear about selection criteria.

Are the works glossy? — **YES** → Are the works small? (Do you want to limit the view to smaller than 50mm?) — **YES** → ⑦

Are the works glossy? **No** ↓

Are the works small? (Do you want to limit the view to smaller than 50mm?) **No** ↓ ⑥

Are you distinguishing between works of different colors? — **YES** → ③

No ↓

Are the works small? (Do you want to limit the view to smaller than 50mm?) — **YES** → ⑤

No ↓

Are you viewing a wide range? (Do you want to have a view not less than 80mm?) — **YES** → ④

No ↓

Are there many objects around the work photographing position? — **YES** → ②

No ↓ ①

Ring light   Bar light   Flat dome light

Mounted camera Option types

|	Camera	Lens	Light
①	Monochrome	View 50mm	Ring light
②	Monochrome	View 50mm	Bar light
③	Color	View 50mm	Bar light
④	Monochrome	View 80mm	Ring light
⑤	Monochrome	View 30mm	Ring light
⑥	Monochrome	View 50mm	Flat dome light
⑦	Monochrome	View 30mm	Flat dome light

*The view is estimated with a distance of 100mm from an object.
*A view not less than 80mm is supported with a fixed camera. In this case, choose a suitable lens and suitable lights according to the view size.

Specifications

		Weight	Feature
Camera	Monochrome	66g	Pixel count: 1.3 million pixels
	Color		
Lens	View 50mm	54g	Standard lens (resolution: 0.054mm/pix)
	View 80mm	56g	Lens suitable for a broader range
	View 30mm	51g	Lens suitable for a small object
Light	Ring light	130g	Standard light that can clearly discover irregularities
	Bar light	75g	Small, with configurable position and angle, available even at a position where ring light is unavailable
	Flat dome light	270g	Provides even irradiations, suitable for glossy works.

✻Lens resolution is estimated with an object distance of 100mm and a 1.3million pixel camera.

Examples
Features

■A vision camera directly attached to duAro JT4 axis.
■Camera and fixture brackets set.
■The angle is configurable to ±30° or ±60°.
■Supports ring lights, dome lights and bar lights.
 ✻Depending on the height of Z axis (JT3), attention should be paid to interference with the second arm.
