

Powered by Kodak production scanners, MISL digitises The Royal Free Hospital's medical files in record time

Totalling some **300m** images

MISL purchased **5** Kodak i5600 production scanners

"MISL has been sending us over 500,000 images per day which are loaded into Open Text and made available at the point of care for all clinicians."

Alastair Crisp
The Royal Free's EDRM programme manager

MISL purchased **6** Kodak i5800 production scanners along with Kodak Capture Pro Network Edition imaging software

"Dealing with medical records is not like scanning invoices or bank statements. You're potentially playing with some-one's life if there isn't the level of quality in the images scanned. It's very easy to forget this which is why we wanted the best equipment to do the job."

Steven Clarke
MISL's Marketing Director

"We've been working to tight timescales on data turnaround for The Royal Free Account, so the **20% gain** means we've been able to deliver the same excellent quality data faster than projected."

Steven Clarke
MISL's Marketing Director

"MISL had to meet a **0.01% image failure rate target** which it had done.

This is a testament to the performance of Kodak Capture Pro imaging software which incidentally also has no click charges - perfect for cost sensitive bureaus where paper processing volumes are huge."

Neil Murphy
Kodak Alaris' UK sales manager

Kodak i5600
scanners process

 **170** pages per minute

Kodak i5800 scanners process
210 pages per minute
