Fürstenfeldbruck, March 2016

Güntner App Tutorial: “How-to” help in form of an app

The established Güntner App and its many functions on the refrigeration and air-conditioning technology have been available to our customers since 2013. It now offers a new functionality which is a valuable addition to previous technical information: The new Tutorial Function.

Structured presentation of the functions

This feature will show you several functions of our products in a concise and clearly arranged manner so that you can learn how to operate Güntner units as quickly and easily as possible. The available subject areas are continuously being updated.

Step-by-step instructions

The first available tutorials are about the installation and programming of the Güntner controllers GMM EC, GMM step, GMM sincon, GMM phase cut and GMM f-drive. An instruction allows you to easily carry out the individual functions, be it the initial start-up, the activation of the tear-off function or the setup of the Low Capacity Motor Management (LCMM).

Figures of the respective display views and brief and clear instructions will guide you step by step through the application. The tutorials can be operated intuitively – just like the other functions of the App: You simply "wipe" from one step to the next.

Available free of charge

You will find the App update with the tutorial function for iOS and Android in the App stores for free. Depending on the geographical region and the selected function, the tutorials are available in up to five languages (English, German, French, Spanish, and Portuguese).

About Güntner

Based in Fürstfeldbruck near Munich, Germany, Güntner GmbH & Co. KG is a world leader in the manufacture of refrigeration and air conditioning equipment components. With approx. 3,000 employees worldwide and production sites in Germany, Hungary, Romania, Indonesia, Mexico, Brazil and Russia, the company shows a strong presence for their partners in all markets. Decades of experience in the industry and the consistent integration of the latest technologies and research findings ensure the high quality standard of Güntner solutions. The international areas of application comprise energy & process cooling projects, industrial and commercial applications in the field of food production and storage as well as HVAC applications for buildings and specific applications such as server room cooling.
