## ABBA Voyage Arena – London

### Overview

ATOL has long been at the forefront of major projects across the UK from Hotels, Refurbishment of National Heritage Property to Entertainment of the nation with the UK's largest theme parks as clients – carrying on that tradition ATOL Construction's team was instructed to offer its knowledge and application of fire retardant treatment to a stunning bespoke arena within London's Queen Elizabeth Olympic Park for the forthcoming [ABBA Voyage](#) comeback tour. Constructed from mass timber, the 3,000-seat hexagonal venue was designed by [STUFISH Entertainment Architects](#) and can be transported and repurposed in other locales following ABBA Voyage's London dates, set to continue throughout 2022.

We are incredibly privilege to have played a huge part in the finished Arena, helping protect both the structure & people but also to have a role in the future of reusable/modular, circular economy principles in theatre and entertainment venue design.

ATOL is a UK leading fire protection organisation that prides itself on the application of our fire protection knowledge at scale, UK wide. Get in touch Today

to find out how we can assist you on building or refurbishing structures of tomorrow.
