

Custom solutions from R+W

In the world of high-performance drive technology, the details make all the difference. For decades, **TANDLER** has been synonymous with uncompromising quality, delivering precision gearboxes engineered to meet the most demanding applications. From one-off designs to tailored adaptations of proven gearbox platforms, TANDLER's ethos is rooted in customisation — because no two applications are ever exactly the same.

That same philosophy shapes our choice of partners. Our long-standing partnership with **R+W Couplings**, renowned internationally for their coupling technology, reinforces this belief in customisation. Like Tandler, R+W doesn't simply provide catalogue solutions; they specialise in developing bespoke couplings designed to match the precise performance requirements of each customer.

R+W offer a large portfolio of solutions, but more importantly these solutions are customisable to suit the challenging characteristics of the most demanding of projects. Examples of R+W's design capabilities range from custom lengths, material specifications, construction methods and mixed clamping methods through to complete one-off coupling designs.

Speak to one of our sales engineering team today to discuss your challenging projects and unique requirements.
