

# A NEW OFFICE INTERIOR FOR IMPACT SOLUTIONS IN LIVINGSTON

May 10, 2022

Impact Solutions supports companies to develop new technologies and services by testing the environmental impact of their offering, from concept through to commercialisation.

Impact Solutions knew they wanted to create a fantastic new interior for their offices but they also knew what ‘value for money’ really represents.

## A VIBRANT SPACE, FULL OF VARIATION AND COLOUR

The Amos Beech team were able to provide realistic pre-project high level figures based on the look and feel that they wanted to create and gave them the confidence to work with our Design & Build Team to deliver the project.

We worked closely with the Impact Solutions management team, providing many colour and product samples to ensure there were no surprises and that everything would meet their expectations.

The result is a vibrant space, full of variation and colour yet retaining a sense of cohesion and professionalism that can only be achieved when you employ the services of great interior designers.

Quiet/concentration working areas are sympathetically merged alongside more creative/collaborative space with the clever use of acoustic screens and open shelving units. These create the feeling of rooms without building solid partitions, saving cost and time on site for the installation.

Impact solutions now have a facility and service offering that clients are continually blown away by whether they have seen their previous premises or not. The building and the people puts them in a great position to grow further over the next 20 years.
