

# Introducing Our Can Crusher Range for Sale or Lease Hire

If your business places waste cans into bins without crushing them first then you've probably noticed that your bins can fill up very fast and require frequent collections. Not only are you paying for the disposal of air inside the uncrushed can but you're also sending recyclable material to landfills. Aluminum cans can be recycled and reused indefinitely. Therefore, an industrial can crusher can not only save your business money by reducing the number of collections, but it can also help the environment. Many cans contain hazardous waste such as oil and paint and require careful disposal into hazardous waste bins. Typically, these are more expensive to collect, therefore it's paramount to utilise all available space by ensuring each can is crushed.

We found the following businesses can benefit the most from installing a heavy-duty can crusher:

- Paint & respraying Firms
- Restaurants
- Car Garages
- Hospitals
- Manufacturers
- Builders & Decorators
- Industrial kitchens

## Our Can Crushers for Sale or Hire

At [Landfill Alternatives](#), we offer a comprehensive range of industrial [Can Crushers](#) suitable for crushing aerosols to 50-litre cans and everything in between. All of our Can Crushers are available to buy or lease. Our commercial-grade machines offer a 5:1 compaction ratio and can crush cans by up to 80%. By implementing a Can Crusher at your business you can:

- Reduce the number of waste collections
- Ensure bin space is fully utilised by removing all air
- Keep the workspace clean and tidy
- Reduce your businesses impact on the environment
- Ensure recyclable material isn't being sent to landfill

### LFA ACC 4 – (Aerosol Can Crusher)

This [heavy-duty crusher](#) is perfect for any business that has to dispose of Aerosol cans or small paint cans. Four cans can be loaded into the chamber and 1200kg of force is applied. During this process, cans are degassed and become safe for disposal.
