## Taking the pain out of Interface and Graphic solutions

Are you seeking a custom HMI and Industrial Label supplier that listens to your needs? We both listen to your needs and offer cost-effective solutions you can trust. Contact us on 01264 721450 and let us take the pain out and put the care in on your next Membrane Keypad, Custom Label or Graphic Overlay project!

Does your product need a custom user interface, graphic overlay or printed label with high-quality graphics and a robust finish? From the simplest adhesive Label to a complex [Membrane Keypad](#) or [Capacitive Switch](#), look no further! RH has successfully provided these products for over 60 years; we are immensely proud of our reputation in the marketplace supplying a range of customers and industries; including Medical, Military, Industrial, Aerospace

and Automotive with no compromise on detail and quality. It's what we do! Please get in touch and together we will find your solution.

## The Process

One of our highly experienced design engineers will be assigned as your technical contact to support your project. During a concept design review (either on-site or via Teams) we will consider every aspect of your project including time scales before offering cost-effective solutions. We will guide you through every phase of our process, including material selection, colour matching, circuit layout and print options.

Following the design agreement, a quotation will be generated. On placement of your order, the project will be released to Engineering for the final approval process. RH will supply dimensioned artwork, colour swatches, and schematic circuit details for your approval. Once approved, your order moves into production. A prototyping service is available to prove any design before

committing to volume production. Our friendly and experienced Customer Service Team will track your order and provide regular updates on your delivery so you can relax and focus on your next project.

## Benefits of working together

RH supports a variety of customers including Design Consultants, OEMs and Electronic Subcontractors. These companies both vary in size and need from small independents to well known blue-chip corporations. We nurtured these relationships and grow together with our customers into the future. We are a trusted and reliable supplier within our industry and have a proven track record with value engineering projects. Our technical expertise and excellent customer service mean we can quickly minimise timings for New Product Inductions (NPI) into manufacturing. Finally, as a supplier, we hold a [BS EN ISO 9001:2015 certificate](#) of quality with Alcumus ISOQAR. This technical configuration makes us compliant for the manufacture of plastic labels, nameplates, overlays, fascias and flexible or rigid format membrane switch panel assemblies using screen print and digital technology.

Our Specialist ERP system effectively supports the management of complex supply requirements with our supply chain in the UK and China. We support the Just in Time (JIT) Kanban system for many customers ensuring smooth “dock to stock” inventory management. If this is more than you require, then we can simplify your stockholding agreements to support a quarterly demand on a call-off basis. We can also handle one-off orders, no problem. We deliver solutions you can trust – every day!
