

The Nature Edit.

TO CELEBRATE NATURE IN THE ENVIRONMENT, WE BRING YOU 'SOLAR' TO CELEBRATE THE SUN THAT FEEDS OUR PLANTS, 'RIPPLE' TO CELEBRATE THE WATERS THAT NOURISH OUR LAND AND 'MISTRAL' TO REPRESENT THE WIND THAT CARRIES THE BIRDS AND SEEDS ACROSS THE WORLD. WE ARE VERY PASSIONATE ABOUT THE ENVIRONMENT WE LIVE IN AND PROTECTING IT FROM DESTRUCTION, SO WE UTILISE POST-CONSUMER PLASTIC WHICH INVARIABLY ENDS UP IN OUR OCEANS AND RECYCLE IT INTO SOMETHING BEAUTIFUL AND INCREDIBLY VALUABLE FOR PEOPLES' WELL-BEING AND HEALTH.

Soundtect®

Solar

The Soundtect Solar Raft

Inspired by nature which offers super acoustic control as a stunning ceiling design.

The contemporary design which consists of 26 individual baffles per set, is suited to a range of commercial applications and ensures effective acoustic management whatever the space. Each panel is standard 1200 x 300 giving an overall coverage of 2600 - 3000mm².

With up to 70% recycled content and finely tuned reverberation and sound control, Freestyle™ is the natural choice for acoustic designs that challenge the status quo.

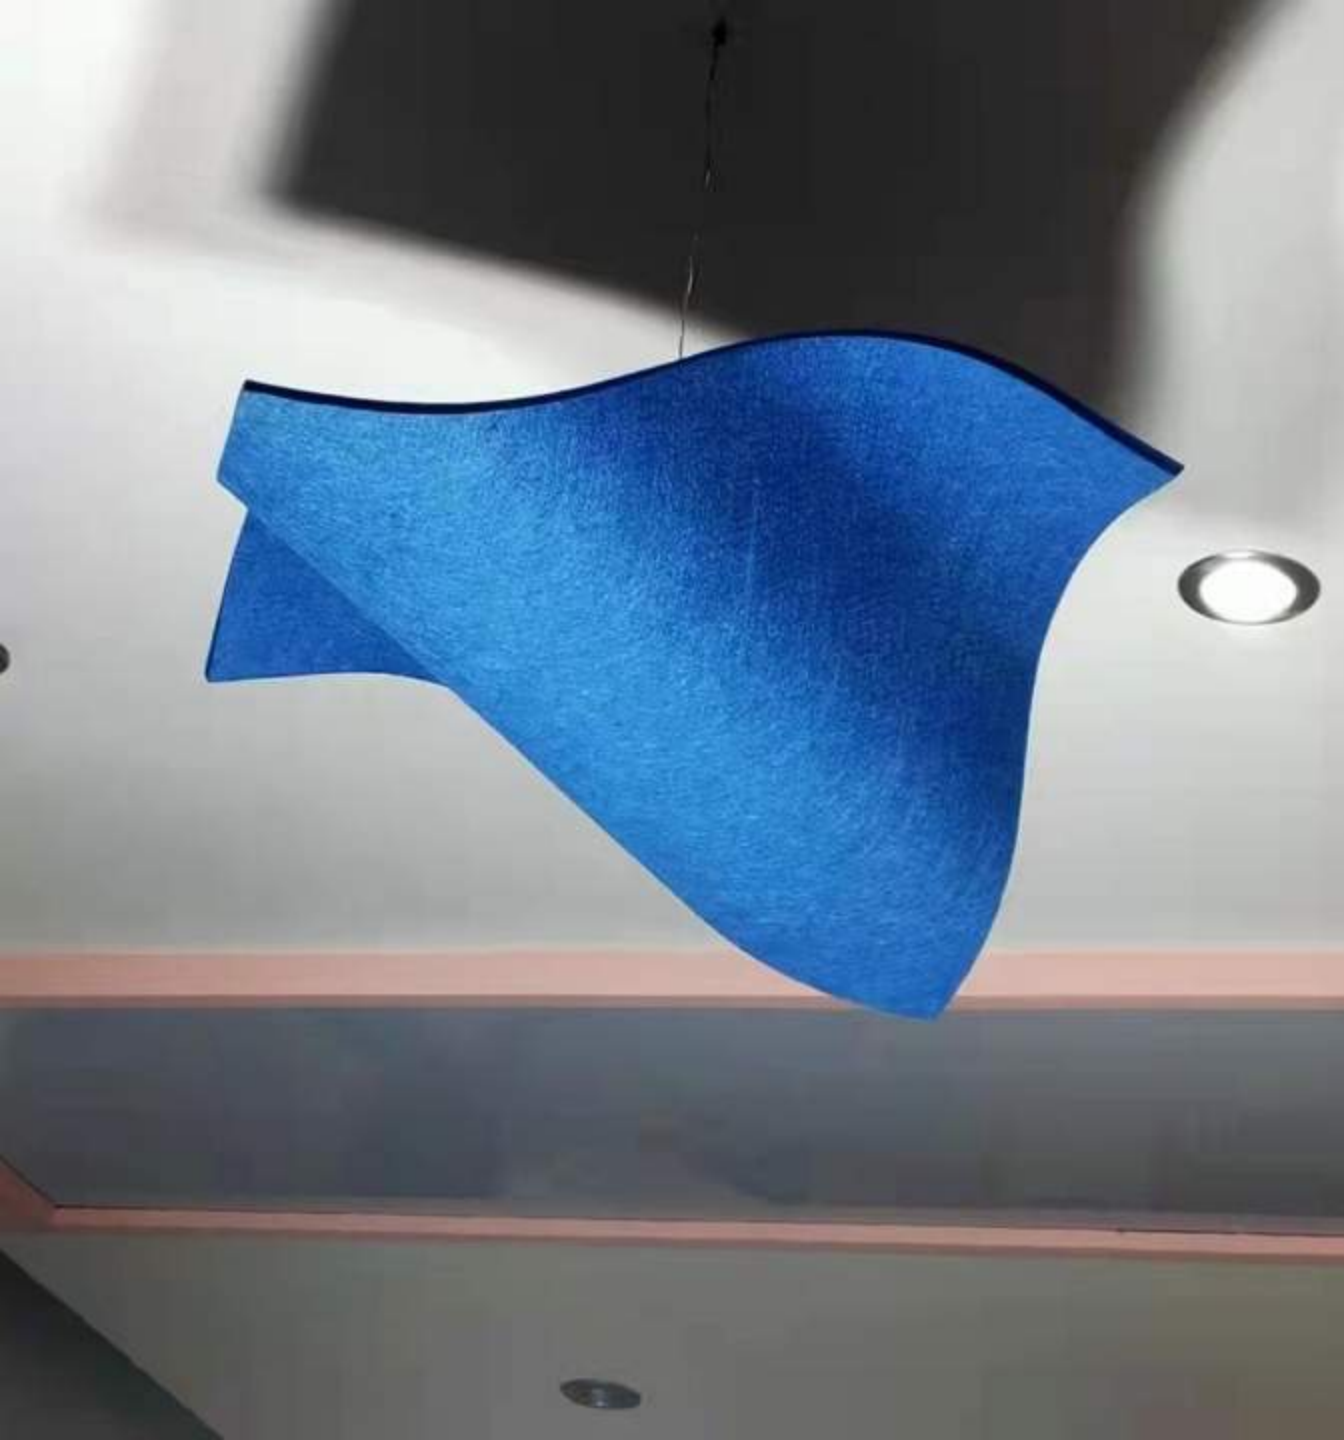

Ripple

The Soundtect Ripple wall application

Inspired by nature creating a gently undulating coverage which offers effective and striking acoustic control as a stunning wall feature.

This simple design consists of individual curved panels in a variety of widths and lengths and is suited to commercial and hospitality applications to ensure effective acoustic management with minimum disruption and loss of space.

Each panel has a maximum length of 2400mm but can be manufactured in tailored widths according to your design. With up to 70% recycled content and finely tuned reverberation and sound control, Freestyle™ is the natural choice for unique effective acoustic design.

Mistral

The Soundtect Mistral Rafts

Inspired by nature's wind. Offering lightweight eye-catching reverberation control as a stunning ceiling application.

The design consists of gently undulating rafts which diffuse the soundwaves and bring about a calm both visually and aurally to areas which need a treatment to soften the bounce and improve the noise levels.

Each ceiling raft is standard 500 x 500mm

With up to 70% recycled content and finely tuned reverberation and sound control, Freestyle™ is the natural choice for acoustic designs that challenge the status quo.

Natures' palette

- Also, new for 2022 is a collection of new colours for the 3D range representing natures glory.
- Cornfield
- Peat
- Dusk
- Seashell
- Moonlight
- Sea Spray

Sustainable Acoustic Solutions

With companies looking extensively at green options for their new offices, Soundtect credentials means that we are frequently specified for projects demanding high levels of sustainable design. Soundtect is very proud of its environmentally friendly approach to acoustics.

Using 70% recycled polyester, the panels are a third-generation product which began life as a plastic PET bottle. Not content with turning this product into exhibition carpets for their second use, the panels were designed after it became clear that one use for one use for exhibitions was a real issue in our companies' environmental beliefs.

Using a careful and effective way of layering the recycled fibres from used carpets, a superior quality, high performance acoustic felt was born. A design team was brought in to create the fabulous designs that are now instantly recognised, and through Soundtect the face of acoustics changed forever.
