So what is the Soundtect USP?

Now that the streets have died down again since the crazy days of CDW, we wanted to firstly say '**Thank you for visiting!**' but to also remind you of who we are and what we can offer. Apart from our superb collection of UK stocked wall and ceiling panels in our standard 3D and Class ranges, Soundtect is a great company to take on bespoke requests. In fact we thrive on it!

But not only this, as one of the few acoustic suppliers in the UK who manufactures their own products, when we tell you how sustainable we are, we know this is true. WHY, because we create all our products from recycled PET, which has already been used in a previous life as exhibition carpets which WE ALSO manufactured, which we KNOW were originally manufactured from recycled plastic from our factories' other divisions..

Our sustainable approach is not only circular economy at its best, but has been highly recognised and applauded by the Hong Kong government for its contribution to reducing environmental pollution. Our manufacturing plants have ZERO CO2 emissions, ZERO Water emissions and all our products are low VOC.

And whats more all our packaging is also RECYCLABLE and if we are installing for you too, our incredible installation teams ALSO recycle all the packaging at their local recycle plant, who, just to hammer it home, have ALSO been recognised for their contribution to sustainability.

Lets talk Bespoke Solutions..

We feel very honoured that Soundtect are often approached to develop and manufacture unique solutions and we absolutely love it. Our fantastic engineering team are superb at solving challenges. So if you have a totally fresh idea, who better to ask than Soundtect. This prestigious hotel project in the Bahamas used Freestyle on the walls and ceilings printed to look like tiles for a superb finish with high acoustic properties, which worked like a dream.

Ceiling applications

Freestyle is the obvious choice for bespoke designs but with all the solutions we offer, nothing is impossible. Bespoke rounded rafts with lighting, Concave 3D panels, birds that fly in the draught or heat, baffles with led lighting, crashing waves on walls. We are so very lucky to have such a brilliant team behind us who can bring any idea to life.

Freestyle: Free your
limitations

Wall Applications

Wall applications are always fantastic opportunities for us to try new technologies and finishes such as the NEW Ripple which is individual strips of curved acoustic tubes initially developed for seven floors of corridors in a large office fit out. Choose from 5 widths and 24 colours to any height you need but a maximum length 2400mm

This cinema project in Malaga had a number of Cubism panels perforated to allow the sound to fill the auditorium without losing the design quality.

Soundtect has supplied many fabulous projects around the world but this was one of the most challenging. This domed planetarium in Kuwait needed concave 3D Tetris panels so we designed over 36 different moulds to follow the curve of the building. The result is fantastic.
