

# Soundtect launches new acoustic solution

## **Introducing Acoura from Soundtect.**

This lightweight ceiling system, manufactured from 70% recycled PET, is the new acoustic solution from Soundtect offering supreme sound reduction.

Manufactured U-shape channels nestle quietly with a hidden unique, but carefully engineered, easy to install fixing method, for wall-to-wall acoustic ceiling applications. ACOURA, available in 24 colours and a variety of widths and depths, offers unbridled reverberation control and a beautiful, serene addition to any room.

Soundtect has been manufacturing a wide range of acoustic solutions for 13 years using post consumer recycled PET as the core for all their products. Recently awarded the Global Green Tag certification level B for the sustainability of their products and the Platinum certification for Asthma and Allergy sensitive credentials, Soundtect acoustic solutions offer high quality, super-efficient additions to any sector or space increasing well-being, creating workable buildings and adding a beautiful design feature at the same time.

Acoura, the newest line in the Freestyle range is yet another well thought addition to an already impressive collection of wall and ceiling products designed to capture reverberated sound and reduce echo, and with the products certified Green to the highest level globally, our clients can be sure they are also buying into a brand that takes environmental issues seriously and can specify these wonderful acoustic solutions into the highest level of sustainable projects in the world.

The New Acoura will be taking its place in Soundtects Clerkenwell showroom next month and this, alongside a host of other acoustic applications will be available to view during Clerkenwell Design Week (23-25 May) or before, by appointment.
