

Is order picking slowing you down?

Top challenges in order picking

Order picking at the speed of light!

Efficiency is the key to increasing the throughput in any logistics operation. The first step in increasing efficiency is locating the most labour-intensive processes. In most warehouses the order picking process is the biggest bottleneck.

This could be caused by inefficient picking routes, mispicks due to a lack of picking guidance or outdated inventory data.

This is where goods-to-man solutions come in. By implementing automated storage solutions time can be saved and mistakes can be prevented.

Benefits of automated storage solutions

- **High picking speed**

Pick faster and more accurate

- **Compact storage**

Save up to 85% of space

- **Less dependant on FTE's**

Always flexible & productive

Faster Accurate Order Processing in ecommerce
