

## NEW – Rotating Black & White Mesh Sight Screen

New for the 2023 Cricket Season, the Stuart Canvas Rotating Black & White Mesh Sight Screen is designed to provide a cost-effective solution that allows venues to play both red & white ball cricket. The innovative screen features an easy and simple rotating mechanism that allows for a quick change from white to black. The mesh screen allows wind to pass through the screen and can be fully retracted when not in use.

We have over 50 years of expertise in designing and manufacturing cricket ground equipment, Our latest innovative product, the Black & white Rotating Mesh sight Screen has been designed to address concerns from clubs & schools about the cost and complications of having separate sight screens for white and red ball cricket. Our rotating mesh screen eliminates the need for two separate screens, one in white and the other in black, using mesh also increases the longevity of the screen by reducing the risk of the screen getting damaged in unpredictable high winds, which is a common problem with sight screens with solid slats. The rotating system allows the transition from white to black to be made quickly by just one person, unlike other screens that need multiple people to turn the whole screen, which can be time consuming.
