

record FlowControl is an automatic people counting system, which controls the number of customers entering your premises and employees using shared areas, to enable safe, social distancing.

The system reliably counts all people in both directions in and out. Once the pre-defined people count is reached, the entry door is automatically deactivated to prevent further access until someone exits the building or shared area. Surface mounted green/red LED stripes, which are IP65 rated and resistant to vandalism, clearly display when entry is allowed or denied.

This cost-effective solution is ideal for use in:

- retail
- public buildings
- offices & factories
- education
- banks
- healthcare
- hospitality & leisure

## Key Benefits:

- Automatically stops the flow of people once the maximum count has been reached
- Alleviates the need for employees to man doors, enabling them to carry on with their jobs
- User-friendly system is easily adjustable to suit peak/off peak hours and working patterns
- Minimal disruption; system can be installed within 2-4 hours
- Retrofittable - is suitable for use on existing automatic sliding, swing and folding doors
- Multiple door configurations are also possible to suit a wide variety of buildings
