

KCC Controls PRESSURE TRANSMITTERS

A PRESSURE TRANSMITTER IS A DEVICE THAT MEASURES PRESSURE IN LIQUID, FLUID OR GAS.

PRESSURE TRANSMITTERS CAN BE USED IN MANY PROCESS INDUSTRIES INCLUDING: OIL AND GAS, CHEMICAL, POWER, METAL, MINING WATER, PHARMACEUTICAL, FOOD & BEVERAGE

WHAT ARE THE BENEFITS OF ABB'S PRESSURE TRANSMITTERS?

Simplicity

Easy operation and set up via the graphic display with intuitive menu navigation

Accuracy

Available accuracy from 0.075%.

This allows the user to control their processes with excellent precision for pressure, level and flow measurements.

Wireless

ABB WirelessHART 266 pressure transmitter enables users to access important process and plant data remotely and securely

Versatility

Pressure transmitter models are suitable for measurements up to 1050 bar (15000 psi)

Reliability

10 year stability
0.15% of URL
High Shock Resistance
High Vibration Resistance

Proven sensor technology with large worldwide installed bases

Cost Effective

Excellent low cost of ownership.

Wide pressure ranges providing flexibility on site.
