

Precolor

CASE STUDY

Shown below is the water tank supplying a school in Staffordshire, built on a concrete pad moulded into a chimney over 70 feet high!

WRAS
APPROVED
PRODUCT

With a one week deadline, the job had to be carried out and completed over the half term break in February.

Scaffolding was erected over the first weekend, the existing tank cut up and removed on the Monday and Tuesday.

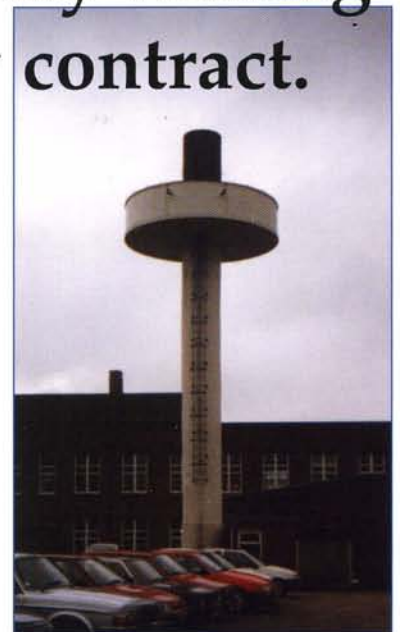

Precolor was the only company willing to take on this extraordinary contract.

Our new semi circular tanks were delivered and craned into position on the Wednesday.

The tanks were plumbed in, chlorinated and up and running by the following Monday for the school to reopen for the new term.
