

***Designers Council
Advanced PCB Designer (CID+)***

Advanced Certified Interconnect Designer-CID+

Advanced Rework Technology Ltd is pleased to announce that they are now able to offer IPC CID+ training and now becomes the only training centre in Europe that is able to offer every IPC training programme to the industry.

Although the CID designation is an important recognition for a designer, continuing education becomes necessary to maintain a designer's effectiveness. The advanced module covers several key goals beyond CID.

The CID+ programme is designed for those who design PCB's as well as those who need the knowledge of the IPC Design Standards.

CID+, Enhanced Certified Interconnect Designer is a valuable professional credential recognized throughout the electronics industry based on several critical IPC documents that link design principles to the end product use of the printed board assembly.

Subjects covered: -

- Design Considerations
- Materials
- Printed Board Characteristics
- Standards to meet Fabrication and Assembly
- Electrical Parameters
- Component Requirements
- Documentation

The Enhanced IPC Designer Certification Program builds on hands-on experience and requires an element of home study prior to the course; at least one month is recommended. The qualification is recognised internationally and hence a high degree of competency is required to be demonstrated. 3-5 years' design experience is recommended.

Prerequisite: - Delegate must be currently CID certified.

Course duration: - 3 days. 2 days of instruction, 1 day qualification.

Training Location: - Advanced Rework Technology Ltd, Essex

Course fee includes: -

- Course materials (supplied prior to course)

- Examination fee

- IPC certificate

Upon successful completion: -

- Registration to list of IPC Certified Designers

- Use of CID+ logo

- Use of honorific CID+
