

Machine Guards

Here at Barkston's we work with a wide range of customers from OEM's (Original Equipment Manufacturer) to small engineering companies producing and fabricating machine guards in clear plastic for superior function including cost savings and practical user safety.

We can work from the most basic hand-drawn designs to interpreting complex CAD files or even fabricate from the existing parts for replacement so replication in a superior material is possible and fits exactly as required. Our capabilities include machining, routing, bending and welding, finding solutions to even the most complex problems.

A recent installation for a major online retailer addressed many issues for them, the major one being visibility so the production line moving parts could be monitored clearly for any issues like blockage or breakdown as previously their guards were made of metal which wasn't ideal and potential problems leading to downtime couldn't be identified.

Your safety is our priority.

Key Features

- A product that steps up and thrives in extreme environments.
- Fabricated in a material which is widely recyclable (no landfill).
- Real cost savings in fabrication and lead time.
- A functional, safe and aesthetically pleasing unit.
