

SureSet

Permeable Paving

5 Good Reasons to Choose a SureSet Tree Pit

A SureSet permeable resin bound tree pit is a low maintenance, elegant solution that also provides the following benefits:

1. Permeable; eliminating the need for unsightly watering tubes
2. Durable; providing protection, durability and flexibility
3. Smooth; no spaces for leaves and litter to accumulate
4. Low maintenance; no loose stone or weeds
5. Reliable; 18 year guarantee.

We all love to see trees in our towns, cities and neighbourhoods; they make them more interesting, welcoming places.

Trees also bring a long list of environmental benefits such as reducing the 'Heat Island' affect, intercepting and slowing down winds, reducing rain water run-off, minimising traffic noise and improving air quality.

So when developing an area of land, don't look at ways to reduce the number of trees, but instead look at ways to include them within your design.

If a tree pit is left open it will soon look sad and neglected; providing the perfect place for windswept leaves and litter to collect. There are a number of ways to prevent this; by planting flowers, installing grilles or laying permeable resin bound paving.

The drawback with planting flowers is the amount of maintenance involved with weeding, watering and replanting. While a negative of installing grilles are that they provide a natural place for rubbish to gather and therefore require regular cleaning.

SureSet permeable resin bound paving is suitable for any shaped tree pit and our huge range of colours cater for all style choices.

A SureSet tree pit allows the option to:

- Inject colour with [Spectrum®](#), our recycled glass range
- Include lights for safety and visual effects
- Incorporate trees into driveways and footpaths
- Use our [TradePack®](#) for smaller areas
- Minimise trip hazards by covering protruding roots.
