

Come and see us at Manufacturing & Engineering North East at the Metro Radio Arena, Newcastle on 6 & 7 July, Stand C17

LG Motion – UK motion technology specialists – offering motion control solutions for diverse and exacting applications

We will be showing examples of our extensive product range which we design and manufacture. This includes precise, reliable, multi-axis motion control components and customised solution packages. Our motion control systems, quite simply, make things go in and out, up and down and round and round!

One stop shop for motion control with global partners

LG Motion rotary and linear stages can be combined with servo and stepper drives and motion control components and systems supplied by a number of key global partners such as Polaris, SMAC, Arcus, Schneeberger and Heidenhain.

Working with the client

Many clients know what components they want and standard “off the shelf” products are readily available which may then also be used by the customer to integrate into their own system.
