

MiniTec – manufacturer of profiling systems celebrates 30 year anniversary in 2016

MiniTec was first set up in 1986 in Bensheim in the south west of Germany. MiniTec profiling systems have proved themselves over the years in a wide range of industrial applications.

Capabilities

Capitalising on a richly deserved reputation as a German manufacturer of quality and technically innovative products their use ranges from protective devices to workplace equipment, test and inspection, single and multiple linear systems through to complex production plant systems.

Keeping it simple – innovative aids for the customer

Always at the forefront of innovative benefits and improvements to the range and services provided, MiniTec profiling systems use a simple yet standard locking arrangement system for assembling profiles.

At the front end, the design process is simplified for the end user by the availability of an intuitive web based iCAD design software, available to download from the website

A new app from MiniTec calculates the deflection of aluminium profile systems and linear slideways. It will calculate values for applications in both vertical and horizontal designs.

MiniTec in the UK

In 2001 Gary Livingstone founded MiniTec UK in Basingstoke moving into a 1500 sqm facility which offers a full design capability, sales support, manufacturing/assembly facility backed up by extensive stocks of profiles to ensure an optimum service is guaranteed to an ever demanding customer base.

Gary and the team in the UK have developed a worthy reputation as providers of simple and complex profiling systems for virtually any application in both industrial and leisure/lifestyle applications. Whether you are looking for a standard “off the shelf” system or require a more complex customised design Gary’s team would love to hear from you.
