

Zouch Converters best-seller BG1 fights fire with new fire retardant specification

Zouch Converters' impregnated expanding foam tapes continue to be used industry-wide to provide high performance joint fillers and weather seals on a number of residential, commercial and industrial projects. As part of the ever-evolving future of Zouch Converters, the team has sought to arm the best-selling tape with yet another quality to add to its inventory. With its new fire-rating, ZOUCHexpandafoam BG1 Super is sure to stave off the competition and continue to prove to be the company's record-breaker.

ZOUCHexpandafoam BG1 Super was formulated in response to industry demand. Increasing pressures on commercial projects to be resistant to fire have made architects and project managers seek out fire-ratings in more and more constituents of their buildings. As a result, BG1 has evolved into BG1 Super, should the project require it. ZOUCHexpandafoam BG1 Super is a PUR-sealing tape equipped with a unique flame retardant impregnation for fire protection joints. It fulfils the requirements of DIN 4102-4 F 120 and is characterised for its simple and reliable application.

ZOUCHexpandafoam BG1 Super has an impregnation that has been specially formulated to seal building segments such as corrugated sheeting and wall partitions for the added protection of the building whilst providing sound insulation and acting as a weather seal. With these great attributes at hand, Zouch Converters is looking forward to watching BG1 Super supersede its BG1 cousin.
