

ZOUCHkousti – guarantees noise control for heavy construction machinery

Zouchkousti acoustic foams are an excellent option for controlling noise and full sound dampening and are particularly popular as noise absorbers alongside generator sets or excavators.

Zouch Converters design and manufacture a complete range of dampers to suit a vast array of applications – from marine to industrial – where heavy machinery operations are the norm. The ZOUCHkousti ranges are designed to suit the exact specifications of the client, cost-effective die-cut gaskets, single-sided acoustic strips or made-to-measure plain sheets facilitate the installation process. These acoustical absorbing foams, predominantly with a polyurethane base are easily cut and installed, and are available with a wide variety of protective facings to match the environmental needs of most applications.

With our technical knowledge and experience our range of acoustic materials will provide you with the answers you need to control sound. These materials offer solutions in a wide range of industries such as domestic appliances, automotive, machine enclosures, boats, heating, ventilation, air conditioning (HVAC), electronics, leisure vehicles and office equipment.

Typical Industry Applications:

- Truck cabin lining
- Panel damping
- Machinery enclosures
- Anechoic chambers
- Engine compartments
- Electrical enclosures
- Noise shields
- Various automotive and marine applications
- Duct lining
- Door panel absorbers
- Acoustic boot lining
- Perimeter strips
- Compressions and generators

Whether your requirements are sheets or rolls; punched components or contoured cuts, with a surface lamination or a special impregnation, we can help – give us a call on 0115 9886295 to find out how we can help you.
