

****New**** CAT III 1000V Screw Terminal Flexible Test Adapter

AdaBV-140 CAT III 1000V Screw Terminal Flexible Adapter

A new product for the electrical installation testing of electrical boards, consumer units and other electrical switches that utilise screw terminals. This new [AdaBV-140 screw terminal flexible adapter](#) is rated at CAT III 1000V that enables additional safety for a technician conducting these tests, even when live voltage is present. It meets the safety requirements for testing of 3-phase electrical boards.

The [AdaBV140](#) consists of a 2.50mm² insulated flexible solid copper conductor and shrouded 4mm Banana socket with a finger guard to protect against inadvertent touching of a conductor under test. The 4mm socket enables connection to common electrical test and measurement equipment such as multimeters, power analysers, insulation testers and oscilloscopes.

The flexible nature of the adapter enables the connection of test equipment even in the most cramped and tight spaces.

Once connected to the screw terminal the protective finger guard enables technicians to connect and disconnect measuring devices even when live voltage is present.
