

Cottages: cost effective heating for chillier homes

Customer brief

To resolve the issues with the heating bill and the consumption cap imposed on French properties .

Background

La Croix Spa is a group of 4 holiday cottages in France where electricity charges are very high. In addition, the owner suffered with electricity blackouts when all properties were let due to a cap on capacity that all French properties are challenged with – regularly exceeded when all heaters were on. The previous heating was wall-mounted electric heaters.

Solution

- Far Infrared panel heaters were recommended at a total of 3.5 kW versus 8.5 kW used previously.
- Additional heaters were installed in cold areas where there was previously no heating.

Results

- ✓ Lower electricity bills
- ✓ No more circuit breaks
- ✓ Stone farmhouse has lost its inherent chill.

“We were amazed! The cottage is now lovely and warm-far more so than we ever achieved with our old electric heaters. I never have to worry about letting the cottages in winter now”.
