

## Horse Stables: Safe, comfortable & economical heating for horses

### Customer brief

To fit the stables with Far Infrared, the latest infrared heating technology for improved horse comfort.

### Background

The client had no existing heating in their stable and was looking for a solution that would keep their horse warm and reduce the need to rug up the horse on colder days.

### Solution

- Herschel IR3 was installed in the stable.
- A quick, easy installation
- The heater has a long lifetime with no maintenance.

### Results

- ✓ The heaters emit no light so no red glare.
- ✓ Warm environment created with peace of mind for the owner in terms of safety for dust and hay.
- ✓ Safe to leave on unattended, overnight, and can be controlled by a thermostat if required.
- ✓ Far Infrared is better absorbed by the skin than the fiercer heat from lamps. The gentler warmth creates a comfortable environment aiding the horse's relaxation.
- ✓ Peace of mind for the owner for the welfare of the horse with the modern warming from Far Infrared
- ✓ Reduces damp, creating a healthy environment for horses.
- ✓ Highly economical with low running costs. Additional cost benefits from no rugs or laundry.

These heaters are worth looking into as recent thinking suggests it is better to under-rug a horse than over-rug it. So if a stable can be kept at a constant temperature, then rugs in theory can be avoided.
