

NEW: S&S Merlin 1000S

The Merlin 1000S gas pressure proving system is designed specifically for use in School and University Laboratories. This panel is to be used to carry out a gas proving test on the pipe work in order to highlight if there is a gas appliance open or a gas leak in the laboratory and gives the teacher full control over the incoming gas supply with the lockable key-switch operation. Able to work in conjunction with carbon dioxide, natural gas, carbon monoxide and LPG sensors, it also has a built in “timeout” facility. This facility will automatically shut off the gas solenoid valve at the end of a specific time period, this time period can be adjusted to 2, 5, 8 hours or can be overridden if required.

Key Features

- Works in conjunction with a Merlin CO2 Monitor
- Protects people and property by testing for leaks before allowing the gas on
- Reliable method of pressure proving using the gas pressure transducer
- Key switch operation gives teacher full control
- Quick proving test, typically 30 seconds from switch on to ready for use
- Time out facility protects the building out of hours
- Low pressure indication, continual monitoring of gas pressure
- Clear LED display for system indications
- Compatible with both BMS and fire alarm systems
- Straightforward to install and calibrate, the Merlin 1000S can be easily adjusted to the user’s requirements
- Covered by S&S Northern 3 year warranty
