

Balex 50 Baler on fully inclusive rental

Pictured here is a Europress Balex 50 baler being made ready for delivery to a customer in the South West. This customer has taken advantage of the fully inclusive baler rentals option available only on Balex balers.

They will soon be baling their waste cardboard and polythene with this efficient new baler and depending on the waste stream, the operator will be able to change the baler's mode of operation to one that is optimal for the material being baled, with just a flick of a switch on the control panel.

Balex balers on a fully inclusive rental agreement

Rentals are available on the full range of vertical balers and compactors supplied by Kenburn. Helping you manage your cashflow and budget for the complete cost of ownership of your waste handling machinery, Kenburn offers all machines in the Balex baler range on a fully inclusive [rental agreement*](#).

With fully inclusive Balex baler rentals, there's a minimum term of five years. These rental agreements includes preventative maintenance, callouts, parts and labour - all included in the quarterly rental charge for as long as you keep the machine.

With a wide selection of top quality machinery available, Kenburn can supply the equipment to suit your business requirements.

Contact us today to arrange a 'no obligation', free site survey and let us help you with reducing your waste disposal costs. We can supply the machine that's right for you.

Key Features of Balex

- Two year Warranty
- Cross cylinder design with very low overall height
- Europress Smart technology
- Two modes of operation – typically switch to one for card and one for plastics

- Key operated as standard –allowing control of who can operate the baler
- Turnbuckle closures – strong threaded spindle ensures a safe and steady opening of the main door
- Meets EN16500 Safety Standard

See the Balex 50 baler in action

The mechanical structure of the Balex range fulfills the criteria set by the FEMI strength calculation analysis, in which every single detail has been designed to serve a durable and working entirety.

The steel is cut using lasers, which gives a high degree of precision and the machinery is welded using robots, ensuring consistency in build quality.

Each baler is built using a Jig to maintain a high degree of accuracy. To stop corrosion, the finished article is shot blasted before being painted.

Exceptional build quality

Europress has designed and manufactured the Balex balers to exacting standards. These machines are superbly engineered and built to last. A close inspection inside and out of the Europress Balex 50 mill size baler shows that as with the other machines in the Balex range, it has been with quality and longevity in mind.

Investing heavily in automation, Europress has produced a range of top quality machines that are built for a long life of typically 6 - 15 years depending on usage and materials baled.

Exclusive to Kenburn in UK

There's a machine in the Balex baler range to meet almost any waste handling demand.

Exclusive in the UK to Kenburn, these cross cylinder Balex balers are low in height and so are easy to position. They are robust, heavy duty machines and an excellent choice for a wide range of uses. Balex balers have large feed openings and produce very dense bales.

Operating at a low noise level of just 59dBa, they are also easy to locate, making them ideal for most industrial environments, especially in busy working areas.

Turnbuckle threaded spindles ensure a safe and steady opening of the main door.
