

Balex balers – the ideal soft plastics baler

Balex balers - the ideal soft plastics baler

Established for more than 50 years, family run [Bond a Band Transmissions Ltd](#) are one of the UK's leading suppliers for TPU thermoplastic polyurethane protective film and sheet, and the only manufacturer in Europe for optical clear film. Their films are used for a variety of different installations including motor vehicles, wind turbine and helicopter blades to help protect them from the elements.

The nature of their manufacturing process creates waste off cuts of thermoplastic polyurethane film and Bond a Band sought a solution for compacting these waste streams. They contacted

Kenburn Waste Management Ltd who are the sole UK dealer for the Europress range of Balex baling machines.

Due to their exceptional build quality, the Balex range of balers come with a unique full parts and labour warranty for two years. They also have GSM technology, so any accidental operational errors such as pressing the emergency stop button can be detected remotely without the need for an engineer call out cost. The entire range of five models from 10 to 50 tonnes of compaction force come with two pressure settings, one for cardboard and one for plastic.

The plastic mode can also be adjusted to compact various types of soft and rigid plastics, so with thermoplastic polyurethane, the compaction cycle can be programmed to create heavy dense bales by slowing down the compaction cycle time.

For more information on the Europress range of baling machines or to arrange a site visit to discuss your waste handling machinery requirements please give the Kenburn sales team a call, 01727 844988.
